

ES214: Discrete Mathematics

Mid-Semester Exam

The exam lasts for 120 minutes.
Attempt EITHER Part A or Part C but NOT both.
In Part B, answer any four among the questions Q6 — Q10.
For all questions, a brief justification for your answer is expected.

1 Part A

1. (1 point) Suppose there are signs on the doors to two rooms. The sign on the first door reads “In this room there is a lady, and in the other one there is a tiger”; and the sign on the second door reads “In one of these rooms, there is a lady, and in one of them there is a tiger.” Suppose that you know that one of these signs is true and the other is false. Behind which door is the lady?

Solution: Let P be the statement on the first door and Q be the statement on the second door. If P is true, then Q cannot be false. Therefore, it must be the case that P is false and Q is true. Therefore, the lady is in the room corresponding to the second door.

2. (1 point) An alumnus from IITGN jokes that there were no two days during his BTech when he woke up at the same time. Argue why this cannot be true (assuming that a wake up time is well-defined for every day of the four years and that times are determined within the minute).

Solution: Apply the pigeon hole principle, the number of minutes available in a day is $24 \cdot 60 = 1440$ (holes) while the total number of days during a four-year period is at least $365 \cdot 4 = 1460$ (pigeons).

3. (1 point) A city has ten recently built intersections. Some of these will get traffic lights, and some of those that get traffic lights will also get a gas station. In how many different ways can this happen?

Solution: Interpret an allocation as a string of length ten over an alphabet of size three representing the three possibilities. The count is 3^{10} . Several other approaches also possible.

4. (1 point) You have an internship offer that requires you to work for five days in January. You can pick any five days as long as no two of them are consecutive. In how many ways can you choose these five days?

Solution: Map every choice of five days $\{d_1, \dots, d_5\}$ from $\{1, 2, \dots, 27\}$ to the set:
 $\{d_1, d_2 + 1, d_3 + 2, d_4 + 3, d_5 + 4\}$.

Note that this is a bijection and the range is the set that we are interested in counting. The domain has size $\binom{27}{5}$.
