Kurman,2016-09-30 When human drivers let intelligent software take the wheel the beginning of a new era in personal mobility Smart wide ranging and nontechnical Los Angeles Times Anyone who wants to understand what s coming must read this fascinating book Martin Ford New York Times bestselling author of Rise of the Robots In the year 2014 Google fired a shot heard all the way to Detroit Google s newest driverless car had no steering wheel and no brakes The message was clear cars of the future will be born fully autonomous with no human driver needed In the coming decade self driving cars will hit the streets rearranging established industries and reshaping cities giving us new choices in where we live and how we work and play In this book Hod Lipson and Melba Kurman offer readers insight into the risks and benefits of driverless cars and a lucid and engaging explanation of the enabling technology Recent advances in software and robotics are toppling long standing technological barriers that for decades have confined self driving cars to the realm of fantasy A new kind of artificial intelligence software called deep learning gives cars rapid and accurate visual perception Human drivers can relax and take their eyes off the road When human drivers let intelligent software take the wheel driverless cars will offer billions of people all over the world a safer cleaner and more convenient mode of transportation Although the technology is nearly ready car companies and policy makers may not be The authors make a compelling case for why government industry and consumers need to work together to make the development of driverless cars our society s next Apollo moment No One at the Wheel

Samuel I Schwartz,2018-11-20 The country s leading transport expert describes how the driverless vehicle revolution will transform highways cities workplaces and laws not just here but across the globe Our time at the wheel is done Driving will become illegal as human drivers will be demonstrably more dangerous than cars that pilot themselves Is this an impossible future or a revolution just around the corner Sam Schwartz America s most celebrated transportation guru describes in this book the revolution in self driving cars The ramifications will be dramatic and the transition will be far from seamless It will overturn the job market for the one in seven Americans who work in the trucking industry It will cause us to grapple with new ethical dilemmas if a car will hit a person or a building endangering the lives of its passengers who will decide what it does It will further erode our privacy since the vehicle can relay our location at any moment And like every other computer controlled device it can be vulnerable to hacking Right now every major car maker here and abroad is working on bringing autonomous vehicles to consumers The fleets are getting ready to roll and nothing will ever be the same and this book shows us what the future has in store

*Ghost Road* Anthony M. Townsend,2020-06-16 A penetrating look at near future disruption as truly autonomous vehicles arrive For decades we have dreamed of building an automobile that can drive itself But as that dream of autonomy draws close we are discovering that the driverless car is a red herring When self driving technology infects buses bikes delivery vans and even buildings a wild woollier future awaits Technology will transform life behind the wheel into a high def video game that makes our ride safer smoother and more efficient Meanwhile autonomous vehicles will turbocharge our appetite for the instant delivery of goods making the future as much about moving things as it

is about moving people Giant corporations will link the automated machines that move us to the cloud raising concerns about mobility monopolies and privatization of streets and sidewalks The pace of our daily lives and the fabric of our cities and towns will change dramatically as automated vehicles reprogram the way we work shop and play Ghost Road is both a beacon and a warning it explains where we might be headed together in driverless vehicles and the choices we must make as societies and individuals to shape that future
