

HOW TO SOLVE DRUG CALCULATIONS

- Identify what type of drug calculation and as a first step, use common sense to estimate a rough answer. In many cases, drawing a picture that visually represents the problem is often a helpful strategy.
- Remember that a formula often used for working out how many tablets to take or for a drug taken orally or injected is:

$$\text{VOLUME REQUIRED} = \frac{\text{STRENGTH REQUIRED (SR)}}{\text{STOCK STRENGTH (SS)}} \times \frac{\text{VOLUME OF STOCK}}{1}$$

TIP: An easy way to remember this formula is
SUNRISE (SR)
SUNSET (SS)

- Remember that a formula often used to work out the number of drops per minute delivered by an intravenous infusion is:

$$\text{DRIP RATE (DPM)} = \frac{\text{VOLUME (mL)} \times \text{DROPS/mL}}{\text{TIME (h)} \times 60}$$

NOTE: DPM stands for *drops per minute*

- Remember that for intravenous infusion, sometimes you are asked to calculate volume, time, or rate, and the following formulae can be useful:

$$\text{VOLUME (mL)} = \text{RATE (mL/h)} \times \text{TIME (h)}$$

$$\text{RATE} = \frac{\text{VOLUME (mL)}}{\text{TIME (h)}}$$

$$\text{TIME} = \frac{\text{VOLUME (mL)}}{\text{RATE (mL/h)}}$$

- After applying the formula (if relevant), or calculating an exact answer using common sense, go back and check: is your final answer close to your initial estimate? If not, why not?

EXAMPLE 1: DRUG MADE UP FROM STOCK SOLUTION

This example illustrates how to work out injections or orally taken drugs made up from stock solution – for example, working out how many mLs to inject when the drug is in a stock solution.

QUESTION: A patient is ordered 70 mg of pethidine. Find the volume required if the stock solution contains 10g of pethidine per 200mL.

TO SOLVE: We'll be using this formula:

$$\text{VOLUME REQUIRED} = \frac{\text{STRENGTH REQUIRED (SR)}}{\text{STOCK STRENGTH (SS)}} \times \frac{\text{VOLUME OF STOCK}}{1}$$

- Note down the strength of medication the patient needs and the stock strength:
Strength Required is 70 mg, **Stock Strength** is 10g in 200 mL

At this point our rough answer is – More than 1 mL and a lot less than 200mL

- Since you need units to be the same, convert 10 g to mg by multiplying by 1000.
 e.g. $1000\text{mg} \times 10 = 10,000\text{mg}$ ($10,000\text{mg} = 10\text{g}$)
- Now put the values into the above for.
 Note that 70mg (what the patient needs) is a very small part of 10,000mg – so expect your answer in mL to be much less than 200mL.

$$\text{VOLUME REQUIRED} = \frac{70}{10000} \times \frac{200}{1} \text{ mL} = \frac{14000}{10000} = \frac{14}{10} \text{ mL} = 1.4\text{mL}$$

CONVERSION TIP:

$\times 1,000$
 g \longleftrightarrow mg
 $\div 1,000$

ANSWER: Based on the above, your answer = 1.4mL

Tintinalli,J. Stephan Stapczynski,O. John Ma,David M. Cline,Garth D. Meckler,2016-03-22 The most widely used and highly regarded textbook and reference of emergency medicine Endorsed by the American College of Emergency Physicians The 8th edition of Tintinalli s Emergency Medicine provides the depth and breadth of coverage that

reflects the complexity and expertise needed to practice emergency medicine successfully in today's fast-paced environments. It is an important contemporary clinical emergency care resource for physicians, NPs, and PAs who practice emergency medicine and for emergency medicine and pediatric emergency medicine fellows. It remains the preferred study guide for in-training and board examinations and recertification. NEW to this edition: Full color design with more tables than ever to succinctly present key information. Extensive updates to all sections incorporating the latest guidelines, evidence-based protocols, and relevant research. Expanded pediatric section with complete clinical information for general and pediatric emergency physicians. Expanded coverage of common emergency department procedures with improved illustrations. Online access to more than 30 videos covering a wide range of procedural and diagnostic topics and focusing on the latest ultrasound-guided techniques. From the reviews of the seventh edition: Collectively they have once again produced an excellent text that manages to cover the broad scope of emergency medicine while remaining an easily readable and practical resource. Last, for the inevitable comparison of this current edition of Tintinalli's Emergency Medicine with other available emergency medicine textbooks available in my opinion, Tintinalli's still comes out on top. It is more concise and easier to read than some, yet it covers the breadth of emergency medicine practice more comprehensively than others. Just as previous editions did, the seventh presents all of the most pertinent and up-to-date information in a well-organized format that is comprehensive yet easy to read. That and many of the attractive new features in this current edition will ensure its place on my bookshelf for years to come. JAMA
