Statistics of Earth Science Data Graham J. Borradaile, 2013-11-11 The Goals of Data Collection and Its Statistical Treatment in the Earth Sciences The earth sciences are characterised by loose and complex relationships between variables and the necessity to understand the geographical distribution of observations as well as their frequency distribution Our frequency distributions and the looseness of relationships reflect the complexity and intrinsic natural variation in nature more than measurement error Furthermore earth scientists cannot design experiments according to statistical recommendation because the availability and complexity of data are beyond our control Usually the system we are studying cannot be isolated into discrete independent variables These factors influence the first steps of research how and where to collect specimens or observations Some issues are particularly troublesome and common in earth science but are rarely handled in an undergraduate statistics course These include spatial sampling methods orientation data regionalised variables time series identification of cyclicity and pattern discrimination multivariate systems lurking variables and constant sum data It is remarkable that most earth science students confront these issues without formal training or focused consideration

The Self-Directed Learning Handbook Maurice Gibbons, 2002-10-02 The Self Directed Learning Handbook offers teachers and principals an innovative program for customizing schooling to the learning needs of individual students and for motivating them to take increasing responsibility for deciding what and how they should learn Whether the students are struggling or proficient the program is designed to nurture their natural passion for learning and mastery challenging them to go beyond the easy and familiar so they can truly excel The program can be introduced in stages in any middle or high school classroom and enables students of diverse abilities to design and pursue independent course work special projects or even artistic presentations community field work or apprenticeships Using this approach the students take on an increasingly autonomous self directed role as they progress The heart of the program is the action contract or learning agreement whereby the student sets challenging yet attainable goals commits to a path for achieving them and evaluates the results Special emphasis is placed on developing skills and competencies that can serve the student well in his or her academic and career endeavors
