

Neutral Safety Switch

All cars equipped with Powerglide transmission are provided with a neutral safety switch which prevents operation of the starting motor except when the transmission is in the neutral (N) or (Park) positions. This switch is a safety feature installed for the purpose of preventing car motion when starting the engine. It is important, therefore, that this switch be maintained in proper adjustment.

GENERAL DESCRIPTION

The ideal transmission is one which will automatically provide the suitable speed or power ratio between the engine and the driving members to meet all driving conditions without any thought on the part of the operator.

Chevrolet's Powerglide Transmission (fig. 45) meets these ideal qualifications because it offers torque multiplication and automatically provides a smooth flexible ride comparable to the result that would be achieved if infinitely minute progressive gearshifts were manually possible.

The Powerglide Transmission is made up of the following components:

1. Torque Converter
2. Planetary Unit and Clutch
3. Oil Pumps
4. Hydraulic Controls

The transmission will be described in three phases:

1. Torque Converter
2. Planetary Unit and Clutch
3. Hydraulic Controls

TORQUE CONVERTER

One of the features of the Powerglide transmission is its ability to provide a smooth application of power from the engine to the rear wheels with a total absence of gear reduction. The engine's power is its ability to provide sufficient torque to the rear wheels to maintain certain car speeds. This torque is received from a rotating crankshaft and once a car is rolling on level ground the engine develops enough torque to keep it moving (fig. 43). But, on a hill or in starting, the driving wheels need more torque and we must have some means of multiplying or converting this torque. This increase and multiplication of engine torque may be accomplished by shifting a gear transmission either manually or mechanically into a lower gear (fig. 44).

Chevrolets equipped with the Powerglide transmission do not have a conventional clutch or transmission between the engine and rear wheels.

Adjustment

1. Loosen two switch assembly mounting screws.
2. Place selector lever in neutral and with clip over flats on end of shifter shaft, insert pin into switch mounting bracket and locating plate (fig. 42).
3. Tighten screws to secure switch in this position and remove locating pin.
