Secondhand Adam Minter,2019-11-12 Revelatory terrifying but ultimately hopeful Elizabeth Kolbert Pulitzer Prize winning author of THE SIXTH EXTINCTION From the author of Junkyard Planet a journey into the surprising afterlives of our former possessions Downsizing Decluttering Discarding Sooner or later all of us are faced with things we no longer need or want But when we drop our old clothes and other items off at a local donation center where do they go Sometimes across the country or even halfway across the world to people and places who find value in what we leave behind In Secondhand journalist Adam Minter takes us on an unexpected adventure into the often hidden multibillion dollar industry of reuse thrift stores in the American Southwest to vintage shops in Tokyo flea markets in Southeast Asia to used goods enterprises in Ghana and more Along the way Minter meets the fascinating people who handle and profit from our rising tide of discarded stuff and asks a pressing question In a world that craves shiny and new is there room for it all Secondhand offers hopeful answers and hard truths A history of the stuff we ve used and a contemplation of why we keep buying more it also reveals the marketing practices design failures and racial prejudices that push used items into landfills instead of new homes

Secondhand shows us that it doesn't have to be this way and what really needs to change to build a sustainable future free of excess stuff

Digital Culture and Religion in Asia Sam Han, Kamaludeen Mohamed Nasir, 2015-09-16 This book critically analyses the functions and interconnectedness between religion and digital media in a range of East Asian countries. It discusses both how religious organizations make use of new technologies and also explores how new technologies are reshaping religion in novel and interesting ways. Based on extensive research, the book focuses in particular on Christianity in South Korea, Neo Shintoism in Japan, Falun Gong in China, and Islam in Southeast Asia. Offering a comparative perspective on a broad range of media practices including video gaming, virtual worship, social networking, and online testimonials, the book also investigates the idea that use of technology in itself mirrors religious practices. With an analysis of the impact of religion and new technology on national consciousness in a range of geographical locations, the authors offer a broadening of the scope of the study of religion, culture, and media.

Me++ William J. Mitchell, 2004-09-17 How the transformation of wireless technology and the creation of an interconnected world are changing our environment and our lives. With *Me*, the author of *City of Bits* and *e topia*, completes an informal trilogy examining the ramifications of information technology in everyday life. William Mitchell describes the transformation of wireless technology in the hundred years since Marconi: the scaling up of networks and the scaling down of the apparatus for transmission and reception. It is, he says, as if *Brobdingnag* had been rebooted as *Lilliput*. Marconi's massive mechanism of tower and kerosene engine has been replaced by a palm-size cellphone. If the operators of Marconi's invention can be seen as human appendages to an immobile machine, today's hand-held devices can be seen as extensions of the human body. This transformation has in turn changed our relationship with our surroundings and with each other. The cellphone calls from the collapsing World Trade Center towers and the hijacked jets on September 11 were testimony to the intensity of this new state of continuous electronic engagement. Thus Mitchell proposes the trial separation of bits, the elementary unit of information, and atoms, the elementary unit of matter, is over. With increasing frequency, events in physical space reflect events in cyberspace, and vice versa: digital information can, for example, direct the movement of an aircraft or a robot arm. In *Me*, Mitchell examines the effects of wireless linkage, global interconnection, miniaturization, and portability on our bodies, our clothing, our architecture, our cities, and our uses of space and time. Computer viruses, cascading power outages, terrorist infiltration of transportation networks, and cellphone conversations in the streets are symptoms of a dramatic new urban condition: that of ubiquitous, inescapable network interconnectivity. He argues that a world governed less and less by boundaries and more and more by connections requires us to reimagine and reconstruct our environment and to reconsider the ethical foundations of design, engineering, and planning practice.
