Part of the port of Kobe in Japan, which was destroyed during the great earthquake of 1995, was kept as it was after the earthquake to serve as a reminder of how strong the earthquake was.

God and if God looked away or left for some ceremony, it will cause a quake.

In India, which has a long history of earthquakes and cultural diversity, the beliefs were multiple. Some believed that there were seven serpents, who were guardians of the seven sections of the lowest heaven. They were also responsible for holding the Earth and when they changed shifts, the Earth shook. There is yet another story, which maintained that Earth was held up by four elephants, these were standing on the back of a giant turtle, which in turn stood on a cobra. When these animals moved, it caused earthquakes.

In Scandinavia, the god Loki was held responsible for earthquakes. It was believed that Loki killed his brother and as punishment, he was taken into an underground cave and tied to a rock. There, a

EARTHQUAKES continuously pose unremitting threats to our young, 10,000-year-old, civilization. There are ample evidences to map a complete profile of vulnerabilities which we have been facing in the recent past. The devastations of Acehese and Thai coasts (2004), Kashmir and New Orleans (2005), southwest Java (2006), Sumatra (2007), western Sichuan and Myanmar (2008), Haiti (2010), Japan, New Zealand and Turkey (2011), comprise an unremitting event of death and destruction. These disasters remind us of a desperate need to understand the basics of Earthquake Science and to implement various methods of mitigation and simultaneously, think of various ways in which prediction can be made possible.

HISTORICAL BELIEFS OF EARTHQUAKES

History tells us that earthquakes have always haunted mankind and because of their horror and destruction, people have associated these events with some supernatural forces. In Kamchatka, Russia, it was believed that earthquakes occurred when a mighty dog, Kozel, shook freshly fallen snow from his coat. Similarly, the Chinese thought that the entire Earth rode on the back of a giant fox, while the Mongolians replaced the fox with a frog. It was said that whenever these animals moved, it created earthquakes. For Japanese, a giant catfish, also called 'The Earthquake Nmazu', was thought to be guilty for earthquakes. measurements of the seismic signals The earthquake phenomenon is one of the most unpredictable and often devastating natural events Sophisticated and advanced technologies are being used for monitoring the seismic activities across the world and efforts are being put in place to develop prediction models The theory behind the design of sensors instrumentation and monitoring system is usually not known to electronics and software engineers upfront The papers included in this book provide such basic guidance to electronics and software design engineers and equip them with the key computational and algorithmic principles based on the underlying theory of seismic activities These design techniques are fundamental to designing sophisticated seismic instrumentation and earthquake monitoring systems The first paper presents a simplified mathematical framework of the seismic events and backend computational software logic that will enable software engineers to develop a customized seismic analysis and computation software The second paper presents a simplified description of various earthquake parameters of interest to a seismologist and how these complex parameters are computed using equations In the third paper a visionary concept is presented to integrate geo scientific instrumentation equipment such as seismic measurement systems to information technology network that would create a centralized web enabled database that would allow transmitting the data acquired by geographically distributed but networked observatories to better predict or alert about the phenomena like earthquakes
