Implementation Issues in Integrated Vehicle Electronics John H. Hall,2005 This major research study provides a fresh
critical look at the way automobile electronics are and should be built Written by Silicon Valley pioneer John Hall this book is
based on his nearly 40 years of experience in developing and producing semiconductors for the automobile industry and
other customers Highly readable and comprehensible for even beginning students of electronics and semiconductor design
this volume provides an in depth explanation of the factors to be considered when building vehicle systems Starting with a
concise history of vehicle electronics Hall walks the reader through the environmental conditions faced by these systems and
the variety of failure mechanisms that can occur Basic and advanced semiconductor issues raised by vehicle implementation
are then discussed in detail A wide range of issues confronting designers from over marketing of risky features to time and
cost constraints are explained Complex electronic modules from many different manufacturers are examined and discussed
as real world case studies of good and bad design techniques Hall concludes by providing design recommendations that will
allow vehicle electronics system developers to build much tougher devices at little or no incremental production cost This
book is the first major work to focus on key issues emerging as major causes of safety and performance problems Vehicle
makers increasingly seek market advantages by providing ever more capable electronics in their products While these
features add much value to vehicles they fail in ways that are beyond the experience and comprehension of most technicians
and accident investigators By combining decades of design experience and innovation with extensive research Hall has
produced unique insights and explanations so engineers can prevent most or perhaps all of these problems John Hall is one
of Silicon Valley s most prolific independent pioneers and inventors He founded Union Carbide s semi conductor operation in
1962 He is a founder of Interstil and Micro Power Systems He is the inventor of the first electronic watch first LCD digital
watch first CMOS liquid crystal display hand held calculator color autofocus cameras among many successful commercial
products He has worked for many American and foreign automakers on specific projects such as integrated two way radios
