The patient's pre-procedure interview revealed no chest pain. The Resting ECG reveals sinus rhythm. There is evidence of rare APCs. Abnormal clinical response to exercise stress with 2 minutes of typical angina with a severity of 4 out of 10 during the procedure. The Stress ECG revealed a less than 1 mm upsloping ST-segment change in the anterior leads which is mildly positive. Stress ECG showed Rare APCs.

Stress images reveal a small sized perfusion abnormality of moderate intensity in the mid-anterior wall segment that was reversible when compared to the rest images.
