

Compare and contrast frog and mammalian circulation

The blood is pumped to the lungs and rest of the body together

Blood going to the rest of the body is mixed/partially oxygenated

Oxygenated blood is only separate when returning from the lungs.

Both are double circulations

Blood passes through atria then through ventricle.

The blood is pumped separately to the lungs and rest of the body

Oxygenated and deoxygenated blood never mix

Key: ■ oxygenated blood
■ deoxygenated blood
■ mixed blood

Cardiovascular and Pulmonary Physical Therapy Joanne Watchie, 2009-10-07 Quick and convenient this resource provides a clinical overview of a wide variety of diseases and disorders that affect the cardiovascular system and lungs and the physical therapy management of patients with them It integrates key concepts of pathophysiology clinical manifestations diagnostic tests and laboratory information and findings with clinically important medical and surgical interventions and pharmacologic therapies then applies the material to physical therapy evaluation and treatment This edition adds an introductory chapter on the oxygen transport pathway the effects of dysfunction along the pathway and the implications for physical therapy Offers a complete overview including basic cardiopulmonary anatomy and physiology the pathophysiology of commonly encountered cardiac and pulmonary disorders diagnostic tests and procedures therapeutic interventions pharmacology physical therapy evaluation and treatment and clinical laboratory values and profiles Uses a bulleted format to make finding information quick and easy Lists the latest drugs used for the treatment of cardiopulmonary disorders Includes information on laboratory medicine and pediatrics to help you apply cardiopulmonary principles to practice Follows the oxygen transport pathway the delivery uptake and extrication of oxygen as it actually functions in a clinical setting providing a logical framework for understanding cardiopulmonary concepts Explains the implications of defects in the pathway essential considerations for clinical practice Includes a comprehensive listing of common cardiopulmonary diseases as well as a number of other diseases that are associated with cardiopulmonary dysfunction Provides new and updated illustrations that depict common pathologies such as the pathophysiology of left ventricular diastolic and systolic dysfunction volume versus pressure overload and dilated versus hypertrophies versus restrictive cardiomyopathies Includes descriptions of important interventions such as lung volume reduction surgery and lung transplantation Adds a new section on simple anthropometric measurements for determining obesity with information on this demographic trend and how it impacts assessment

Cardiovascular System Dynamics Jan Baan, Abraham Noordergraaf, Jeff Raines, 1978 This book offers a novel approach to the study of the mammalian cardiovascular system Instead of focusing on a particular part of the system or on a particular group of techniques or approaching the system from a particular point of view it stresses a balanced presentation of ideas all the major component parts of the system are discussed as well as the behavior of the system as an integrated whole both basic and clinical viewpoints are represented both detailed analysis and comprehensive synthesis are offered In addition trends in modern instrumentation and the use of computers in improving patient care are important and recurrent themes Spirited discussions of current controversies and philosophies highlight the presentations The 62 papers in this volume were invited for a major international conference held in April 1975 which marked the coming of age of this field and led to the founding of the Cardiovascular System Dynamics Society The conference brought together outstanding researchers in the life sciences biology physiology medicine and the physical sciences biophysics bioengineering in order to integrate

their findings more intricately and to chart the present state and future directions of the field Since the cardiovascular system has been one of the first areas to receive attention under the newly emerging symbiosis between engineering and medicine the book also serves a useful secondary purpose as a model of what can be accomplished by such integrated effort The papers are organized into 12 sections The first 9 offer a tour of the cardiovascular system with papers arranged within each section to lead the reader from theoretical to clinical viewpoints Included are sections on cardiac muscle coronary circulation ventricular dynamics systemic arterial tree microcirculation systemic veins pulmonary vasculature control mechanisms in specific vascular beds and cardiovascular system control The last 3 sections offer tutorial overviews of theoretical and experimental methods applied to the cardiovascular system and of cardiovascular instrumentation and computer analysis
