L. Grimsdale, Wolfgang Strasser, 1991-06-06 EUROGRAPHICS workshops on Graphics hardware have now become an established forum for an exchange of information concerning the latest developments in this field of growing importance. The first workshop took place during EG 86 in Lisbon. All participants in this event considered it a very rewarding workshop to be repeated at future EG conferences. This view was reinforced at the EG 87 Hardware Workshop in Amsterdam which firmly established the need for and a high interest in such a colloquium of technical discussion in this specialist area within the annual EG conference. The third EG Hardware Workshop took place in Nice in 1988 and this volume is a record of the fourth workshop at EG 89 in Hamburg. The material in this book contains papers representing a comprehensive record of the contributions to the 1989 workshop. The first part considers Algorithms and Architectures of graphics systems. These papers discuss the broader issues of system design without necessarily raising issues concerning the details of the implementation. The second part on Systems describes hardware solutions and realisations of machines dedicated to graphics processing. Many of these contributions make important references to algorithmic and architectural issues as well but there is now a greater emphasis on realisation. Indeed many VLSI designs are described. *Subject Guide to Children's Books in Print 1997* Bowker Editorial Staff, R R Bowker Publishing, 1996-09 **Computer Arithmetic** Earl E. Swartzlander, 1990 Mathematics of Computing Numerical Analysis **Evaluation of Performance Enhancements in Algebraic Manipulation Systems** Carl Glen Ponder, 1988 This thesis examines several proposed ways to speed up symbolic algebraic computation hashing techniques parallel processing application of the FFT and alternative representations of polynomial expressions. Polynomials and variants like rational functions truncated power series and Poisson series represent an important class of expressions in algebraic manipulation. Parallel algorithms are analyzed for multiplying and powering sparse and dense polynomials including parallel forms of the FFT. Alternative polynomial representations are compared and it is suggested that an efficient algebraic manipulation system might use a family of polynomial representations rather than one general form. Grobner basis reduction is an inherently hard problem yet can be used as a powerful tool in computational mathematics. Contrary to recent claims empirical studies show that it is difficult to exploit parallelism in Grobner basis computation. A variety of hashing mechanisms have been proposed for performing operations in symbolic computation including memo functions for recognizing and eliminating redundant computations. The proposed mechanisms are presented in summary. Empirical study shows that memo functions except in certain circumstances may not be an advantage. Additional summary of relevant results in parallel algorithm design and parallel processing machines and languages is presented. **Report**, 1988 Canadian Who's Who 2003 Elizabeth Lumley, 2003-03 Now in its 93rd year of publication this standard Canadian reference source contains comprehensive and authoritative biographical information on notable living Canadians.
