Chromatography Of Aroma Compounds And Fragrances:

Chromatography of Aroma Compounds and Fragrances Tibor Cserhádi, 2010-03-10 The quantity and composition of aroma and flavour compounds in foods and food products exert a marked influence on the consumer acceptance and consequently on the commercial value of the products It has been established many times that one of the main properties employed for the evaluation of the product quality is the flavour that is an adequate flavour composition considerably enhances the marketability Traditional analytical methods are generally unsuitable for the accurate determination of the quantity of this class of compounds Moreover they do not contain any useful information on the concentration of the individual substances and they are not suitable for their identification As the stability of the aroma compounds and fragrances against hydrolysis oxidation and other environmental and technological conditions shows marked differences the exact determination of the flavour composition of a food or food product may help for the prediction of the shelf life of products and the assessment of the influence of technological steps on the aroma compounds resulting in more consumer friendly processing methods Furthermore the qualitative determination and identification of these substances may contribute to the establishment of the provenance of the product facilitating the authenticity test Because of the considerable commercial importance of flavour composition much effort has been devoted to the development of methods suitable for the separation and quantitative determination of flavour compounds and fragrances in foods and in other industrial products
