Measurement, Automation, and Control in Artificial Intelligence and Machine Learning Puramanathan Naidoo, Ahnen, Kwamena Quagrainie, Jemimah Etornam Kassah, 2024-11-22 Food security has been persistently recognized in global discourse as one of the world's main challenges. While some progress has been made towards ensuring access to safe nutritious and sufficient food for all people all year round, SDG Target 2.1 on eradicating all forms of malnutrition, SDG Target 2.2 over 800 million people are estimated to suffer from chronic hunger. With outputs from capture fisheries stagnating over the past few decades, aquaculture holds the potential to play crucial roles in achieving food security, but its importance for food security and nutrition has often been undervalued and concerns exist regarding its environmental footprint. The rapid expansion of aquaculture has consequences relating to environmental sustainability, but aquaculture nonetheless holds the potential to significantly contribute to human food security. The goal of this collection is to highlight the contribution of aquaculture to food security through the development of sound and sustainable production practices. The focus will include all three pillars of sustainability: environmental sustainability, production technologies that optimize fish production and or minimize significant environmental disruptions or impacts, economic sustainability, value chain analyses, market access for fish products, policy analysis and social and community sustainability, socially responsible aquaculture practices contributing to food security and well-being.

Social Mobility for the 21st Century Steph Lawler, Geoff Payne, 2017-12-14 Social Mobility for the 21st Century addresses experiences of social mobility and the detailed processes through which entrenched intergenerationally transmitted privilege is reproduced. Contributions include but are not limited to family relationships, students' encounters with higher education, narratives of work careers and mobility identities. The book intends to challenge both the framework of the more traditional approach and the politicisation of mobility which casts mobility as a possession, a commodity or a character trait and threatens to castigate the non-mobile as carrying a personal responsibility for their situation. This book presents critical analyses of routes into social mobility, the experience of social mobility and the political and social implications of social mobility's panacea status. Drawing on the work of established scholars and more recent entrants, the chapters offer a fresh look at social mobility, opening up the topic to a wider readership among the profession and beyond and stimulating further debate. This book will appeal to higher level students and scholars of sociology alike as well as having a broad cross-disciplinary appeal.

Population Medicine and Health Economics Simiao Chen, An Pan, Till Bärnighausen, Chen Wang, Qiushi Chen, 2024-10-04 Population medicine is an emerging medical discipline that aims to maximize aggregate and long-term population health by mobilizing accessible resources through its five care responsibilities: prevention, diagnosis, control, treatment and recovery, integrating and applying knowledge, principles and

technologies of modern medicine and related disciplines coordinating individual health behaviors and collective health actions and serving as the medical foundation of public health practices Population health economics is important in population medicine and public health Since resources are limited in order to maximize the aggregate and long term population health benefit we must produce and allocate resources in an effective and efficient manner The value of healthcare interventions are often underestimated and health resources are mostly insufficient The broader social and economic values of healthcare interventions are frequently ignored It is important that we distribute health resources wisely and maximize efficiencies at all three levels micro meso and macro levels Thus this Research Topic focuses on how population health economics as both a key method and a value can help population medicine practitioners to provide better and more efficient care to the population they serve
