EARTH'S ROTATION

Have you ever wondered why we have day and night? Is why your shadow looks different at different times of the day? Is why the sun looks like it's moving across the sky throughout the day? It's because of Earth's rotation!

ROTATION

Earth spins around an invisible line called the axis. This spinning motion causes each 1/2 rotation (about 24 hours) to make one full day. As Earth rotates, different parts of it face the Sun. The side facing the Sun is daytime, and the side facing away is nighttime. When the Sun sets and night comes, that's

DAY AND NIGHT

The Sun doesn't move around us at night! The light of day is coming from the Sun, and the light of night is coming from the Moon. The Sun is always shining, but we only see it when it's daytime. The Moon is always shining, but we only see it when it's nighttime. The Sun is always shining, but we only see it when it's daytime. The Moon is always shining, but we only see it when it's nighttime.

SHADOWS AND THE SUN

Shadows are created when an object blocks the light from the Sun. The Sun is always shining, but we only see it when it's daytime. The Moon is always shining, but we only see it when it's nighttime. The Sun is always shining, but we only see it when it's daytime. The Moon is always shining, but we only see it when it's nighttime.

OUR SOLAR SYSTEM

Our solar system is made up of the Sun and everything that orbits it. That includes eight planets, many moons, and smaller objects called asteroids and comets. The planets orbit the Sun in a path called an orbit. Some of the things that orbit the Sun are the planets, moons, asteroids, and comets.

WHAT IS THE ASTEROID BELT?

The asteroid belt is a region of space between Mars and Jupiter that is filled with many small, rocky objects called asteroids. These objects are left over from the formation of the solar system. Some of the asteroids are very small, while others are very large.

Here is a diagram to describe the order of the planets.
