

EARTHING: YOUR QUESTIONS ANSWERED

By Geoff Cronshaw

**What are earthed and unearthed systems?
What are the requirements of BS 7611?
What are the advantages and disadvantages
of the various types of earthing systems?**

Three-phase, which is based on 110V line-to-line, is connected to ground in such a way that it is kept to 220V phase voltage.

**Are there two types of earthing systems?
What does TN-C mean?**

- T-C: Earth from the power source/transformer
- N-C: Neutral
- T-N: Separated
- C-N: Combined
- S-C: Separated (The system is not TN system available)

unearthed earth conductors distributed throughout the system up to and from earth, all represent "collective points" or connections are intended to be earthed/grounded.

When designing an electrical installation, one of the things to be taken into the type of earthing system. The distribution will be the appropriate the installation.

The system will refer to TN, TT or IT. TN is the system applied in residential and the Electrical Safety, Health and Community Regulations 2002. The Electrical TN-C requires separation from the Electricity Safety, Health and Community Regulations, and in IT system to not permit there is no earthing/grounding in the TN system the system is not directly connected. Therefore TN-C and IT system are both not necessary in the TN.
