Review:

1. **Electric field** is defined as the aura about the space surrounding a charged object that exerts an electrical influence upon other charged objects in that space. The **direction of the electric field vector** is defined as the direction that a positive test charge would be accelerated. **Potential energy** is the energy stored in an object due to the position of that object.

A Gravitational Analogy:

2. Two diagrams are shown at the right.

In diagram A, a mass is held at an elevated position. When let go of, the mass falls from point A to point B.

In diagram B, the mass is originally at point A and a person moves it back up to point B.

For each diagram, indicate if work is done by a non-conservative force in moving the object from its initial position (point A) to its position at point B. Finally, indicate the position of greatest gravitational potential energy.

Circle the answers in the space below the diagrams.

Diagram A

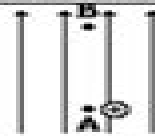

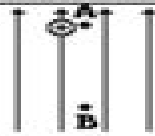

W_{nc} done on mass:
Yes or No
Highest PE: A or B

Diagram B

W_{nc} done on mass:
Yes or No
Highest PE: A or B

3. The following diagrams show an electric field and two points - labeled A and B - located within the electric field. A positive test charge is shown at point A. For each diagram, indicate whether work must be done upon the charge to move it from point A to point B. Finally, indicate the point (A or B) with the greatest electric potential energy and the greatest electric potential (PE / charge).

Critical Voices in Science Education Research Jesse Bazzul, Christina Siry, 2019-01-23 This book is a collection of narratives from a diverse array of science education researchers that elucidate some of the difficulties of becoming a science education researcher and or science teacher educator with the hope that through solidarity commonality and telling the story justice oriented science education researchers will feel more supported in their own journeys Being a scholar and teacher that sees science education as a space for justice and thinking being different entry into this disciplinary field often comes with tense moments and personal difficulties The chapter authors of this book break into many painful awkward and seemingly nebulous topics including the intersectional nuances of what it means to be a researcher in the contexts of epistemic rigidity white supremacy and neoliberal restructuring Of course these contexts become different depending on how teachers students and researchers are constituted within them as racialized sexed gendered disposable valued subjects We hope that within these narratives readers will identify with similar struggles in terms of what it means to desire to do good in the world while facing subtle and not so subtle institutional personal cultural and political challenges
