

# Thermo Top Reverse Boiler System Overview

**HEATING** - The Thermo Top heater is heating a circuit of antifreeze which is contained in the storage cylinder. This hot coolant is circulated around the heating blower boxes or radiators. These transfer the heat from the coolant into the blown air. The Webasto heater is replacing the heat used.

**HOT WATER** - Inside the storage cylinder there is a coil. The cold fresh water is pushed through the coil when the hot tap is turned on. As the cold water passes through the coil it collects the heat from the stored hot antifreeze. A Thermostatic mixer valve controls the output temperature.
