

Electrical Safety

ELECTRICITY CAN KILL

Over 1000 accidents of work involving electrical equipment are reported to Health & Safety Executive. 10 of these are fatal. From voltages over 50 volts AC or 120 volts DC are lethal shocks can cause serious and permanent

DO THE REGULATIONS REQUIRE?

Health and safety at Work Act 1974 states that:

Employers are responsible for the safety and health of employees and the public, and of risk from work.

Electricity at Work Regulations 1989 states that:

Electrical equipment must be used in a way that prevents

Electricity, employees and the equipment must be protected from electrical equipment as necessary to prevent

Electricity, employees and the equipment must be protected from electrical equipment as necessary to prevent

Electrical equipment used in hazardous environments must be constructed or used in a way that prevents

Employees with competent knowledge or experience or under adequate supervision should work with, or on, electrical equipment that could cause danger

Reporting of Injuries, Diseases and Dangerous Occurrences Regulations 1995 states that:

Reporting authority must be notified immediately by telephone using the Reporting Line (0800 123456) or via the Health and Safety Executive's Reporting Line.

ASSESSING THE RISKS

Health and safety risk assessment should take into account the risks associated with electricity.

Risk assessment consists of 4 steps:

- (1) Identifying the hazards.
- (2) Deciding who might be harmed and how.
- (3) Evaluating the risks and deciding on precautions.
- (4) Recording your findings and implementing them.
- (5) Reviewing your risk assessment and updating it if necessary.

Electrical equipment risks come from:

1. Faults with live parts.
2. Electrical faults and the risks are greatest where the equipment contains a heat source.
3. Flammable or explosive atmospheres.
4. Heat conditions where combustible equipment can easily become fire and can make the surroundings live and dangerous.
5. Confined spaces where if an electrical fault develops it will be very difficult to avoid a shock.
6. Some of the equipment such as extension leads and flexible leads which are particularly liable to damage.

For further guidance please see HSE's website www.hse.gov.uk/electrical/

REDUCING THE RISKS FOR EMPLOYERS

Ensure people working on or with electrical equipment or systems are 'competent' for the task.

Ensure the electrical installation:

- Complies to BS 7671 Requirements for electrical installations.
- Is maintained in a safe condition.
- There are enough socket outlets are provided.

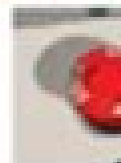

Provide safe and suitable equipment:

- Equipment must be suitable for the working environment.
- Consider using air, hydraulic or hand powered tools in harsh conditions.
- Provide a switch near each fixed machine to cut off power in an emergency.
- Replace damaged sections of cable promptly.
- Special electrical equipment should be used in potentially flammable or explosive atmospheres.
- Consider asking for specialist advice.

Reduce the voltage:

- Temporary lighting can be run at lower voltages.
- Battery powered tools are safest.
- Portable tools designed to be run from a 110 volt centre tapped earth supply are available.

Provide a safety device (an RCD) if equipment operating at 230 volts or higher is used. An RCD is a device which detects some faults in the electrical system and rapidly switches off the supply.

REDUCING THE RISKS FOR EMPLOYEES

Visual inspection should also be done by employees.

Work safely:

- Equipment in faulty equipment must be taken out of use, labeled 'DO NOT USE' and examined by a competent person.
- If possible, break and power switch outlets should be switched off before plugging in or unplugging.
- Equipment should be switched off and/or unplugged before cleaning or making adjustments.

Always wear cables, all be present and live when plugging in the device, present in new buildings.

Have overhead cables that switched off if possible or maintain safe working distance from the lines.

The use of work stopping company must be consulted before starting work near electrical equipment in buildings.
