

## 1 Connect Battery

For safety, the Back-UPS ES is shipped with one battery wire disconnected. The UPS will not operate until the wire is connected to the back-side battery terminal.

**NOTE:** Small sparks may occur during battery connection. This is normal.

1 Turn the Back-UPS ES down and press in the release tab.

2 Connect the battery wire firmly to the battery terminal.

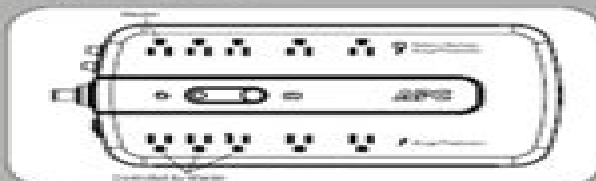

3 Insert the battery back into the compartment. Slide the battery cover back in place until the tabs lock.

## 2 Connect Equipment

### Battery Back-up + Surge Protection

These outlets are powered whenever the Back-UPS ES is switched ON. During a power outage or other utility problem (surge, brown-out, etc.), these outlets will be protected for a limited time by the Back-UPS ES. Plug your computer, monitor, CD-ROM drive and one other data sensitive device such as an external disk or tape drive, or Home Protection Networking Association (HPNA) device into these outlets.

### Surge Protection

These outlets provide full time protection from surges even if the Back-UPS ES is switched OFF. Plug your printer, fax machine, scanner, or other peripherals that do not need battery power into these outlets.

Place the Back-UPS ES to avoid:

- Direct sunlight
- Excessive heat
- Excessive humidity or contact with fluids

Plug the Back-UPS ES power cord directly into a wall outlet; not a surge protector or power strip.

### Connect Computer Cable

The supplied cable and software provide automatic file saving and shutdown of the operating system in the case of a sustained power outage.

Connect the cable to the Data Port of the Back-UPS ES. Connect the other end of the cable to the USB port on your computer. The software will automatically find the USB port on your computer.

### Connect Modem / Phone / DSL / Fax / IS-100Base-T / HPNA / Cable Modem / CATV or DSS to Surge Protection

The Back-UPS ES protects a single line (2-wire) phone (including Digital Subscriber Line - DSL), Home Protection Networking Association (HPNA) type equipment (modem, HPNA, etc.), or fax machine from surges which connected through the UPS as shown in the drawing. The UPS also protects a cable modem, CATV converter, or DSS receiver from surges when it is connected through the UPS coaxial connector, as shown in the drawing.

### Master/Controlled Outlets

Like peripheral devices, printers/scanners, speakers, continue to draw power when not in use. To conserve power, the Back-UPS ES uses "master/controlled outlets". The Master outlet powers when the master device (computer) that is plugged into the Master outlet is no longer drawing current, and it automatically shuts off power to the Controlled outlets. Pressing the MASTER/ENABLE button for one second enables and disables this feature. When enabled, the green MASTER/ENABLE LED is lit (on). When it is disabled, the LED is not lit (off). The Back-UPS ES ships with MASTER/ENABLE activated. **NOTE:** Do not connect peripherals to the Controlled Outlets if you want them to continue to run when your computer is turned off.

### Threshold Programming

When the computer is turned off, the Master outlet shuts off power to the Controlled outlets. However, when the computer goes into "hibernation (sleep) mode" the Master outlet may not properly recognize the reduced power level. To ensure the Master outlet shuts off power to the Controlled outlets properly, the threshold setting may need to be adjusted from the "default value". If the peripheral plugged into the Controlled outlets do not turn off when the computer goes into hibernation mode, first ensure the MASTER/ENABLE LED is lit, and if so, then perform the procedure provided below to adjust the threshold setting to High. Conversely, if the computer has an extremely low power level, it may require that the threshold setting be set to Low if the Controlled outlets automatically shut off, even when the computer is running. The Back-UPS ES automatically tests this mode in five seconds if no buttons are pushed, or no operations are run. The three threshold settings that can be selected are summarized in the table below.

Indicators Flashing	Threshold Setting	Input Voltage Range (Hibernation Mode)
1. Master Enable LED	Low	110 volts
2. Master Enable LED, On Low LED	Medium (default)	120 volts
3. Master Enable, On Low, Replace Battery LEDs	High	130 volts

Perform the following steps to change the threshold settings:

1. Plug the Back-UPS into the utility power source, do not turn power on. The unit will be in standby mode (the LEDs are lit).
2. Press and hold down the MASTER/ENABLE button for 10 seconds, until all indicators flash to show it has entered threshold programming mode.
3. When the MASTER/ENABLE button is released, the LEDs that are illuminated indicate the current threshold setting: Low, Medium or High.
4. Press the MASTER/ENABLE button to select a different threshold setting.

## 3 Power On and Install Software

Press the ON/OFF switch to power the unit ON.

A single short beep and the green "Power On" indicator confirms the Back-UPS ES is on and ready to provide protection.

The Back-UPS ES should charge for at least 16 hours to ensure sufficient runtime. The unit is being charged whenever it is connected to utility power, whether the unit is turned ON or OFF.

If the red Battery Warning Fault indicator (located on the end near the power cord) is lit, your unit's wiring presents a shock hazard that should be corrected by a qualified technician.

### Install the PowerChute<sup>®</sup> Personal Edition software

Insert the PowerChute Personal Edition CD-ROM into your computer and follow the installation instructions on the screen.

## Status Indicators

The Back-UPS ES indicates operating status using a combination of visual and audible indicators. Use the following table to identify the status of the Back-UPS ES.

Status	Visual Indicators (Lighting Battery - Red)	Audible Indication	Alarm/Announcement When
<b>Power On</b> - UPS is supplying conditioned utility power to the load.	Power On LED - ON	Silent	Not applicable
<b>On Battery</b> - UPS is supplying battery power to load on battery (10 min).	Power On LED - ON (off during time)	Beeping 4 times every 30 seconds	UPS transfers back to Power On operation, or when UPS is turned off.
<b>Low Battery Warning</b> - UPS is supplying battery power to load using conditioning to the battery output, and the battery is near exhausted.	Power On LED - Flashing (every 1/2 seconds)	Beeping (every 1/2 seconds)	UPS transfers back to normal operation, or when UPS is turned off.
<b>Replace Battery</b> - The battery is disconnected. The battery is in need of charging or is at the end of its useful life and must be replaced.	Power On and Replace Battery LEDs - Flashing (intermittent)	Constant tone	UPS is turned off with the power switch.
