challenges involved in making STEM to STEAM conversions at levels ranging from K12 through graduate university programs A large driving force for STEM to STEAM conversions is the emerging awareness that the scientific workforce finds itself less than ideally prepared when engaging with so called wicked problems the complex suite of emerging multifaceted issues such as global climate change social injustice and pandemic diseases Dealing with these issues requires cross disciplinary expertise and the ability to insert technical and scientific understanding effectively into areas of public planning and policy The different models and possibilities for STEAM as the next phase of the STEM revolution laid out in this book will promote research and further our understanding of STEAM as a forward thinking approach to education Gillian Roehrig STEM Education University of Minnesota USA The ideal teacher sees opportunities for integrating ideas from multiple disciplines into every lesson This book offers many worthwhile suggestions on how to do that deliberately and systematically George DeBoer Project 2061 of the American Association for the Advancement of Science USA For the last several years calls for expanding STEM education have grown but so too have concerns about technocratic approaches to STEM This volume challenges the community to consider broader views on STEM by focusing on the place of arts education within this movement The chapters offer much needed new perspectives on the re integration of the arts and sciences Troy Sadler School of Education University of North Carolina USA
