

Student Exploration: Covalent Bonds

Vocabulary: covalent bond, diatomic molecule, Lewis diagram, molecule, noble gases, nonmetal, octet rule, shell, valence, valence electron

Prior Knowledge Questions (Do these BEFORE using the Gizmo.)

1. There are eight markers in a full set, but Flora and Frank each only have seven markers. Flora is missing the red marker, and Frank is missing the blue marker. What can they do so that each has a full set of markers? **Frank should give the red marker to Flora, and Flora should give the blue marker to Frank.**
2. Otto and Olivia each have six markers. Otto is missing the purple and green markers, and Olivia is missing the black and brown markers. What can they do so that each has a full set? **Otto should give the black and brown markers to Olivia, and Olivia should give the purple and green markers to Otto.**

Gizmo Warm-up

Just like the students described above, **nonmetal** atoms can share electrons. As you will see in the *Covalent Bonds* Gizmo™, atoms form bonds in this way.

To begin, check that **Fluorine** is selected from the **Select a substance** menu. Click **Play** () to see the electrons orbiting the nucleus of each atom.

1. The outermost electrons in each atom are called **valence electrons**. How many valence electrons does each fluorine atom have? **7 valence electrons.**
2. Click **Pause** (). Drag an electron from the left atom to the right atom. Click **Play**.
What happens? **They equally share the one atom on the new shell that is formed.**
3. Click **Pause**, drag an electron from the right atom to the left, and then click **Play**.

What happens now? **They continue to spiral around both atoms, but now there are two electrons on the shell.**

Activity A:
Sharing electrons

Get the Gizmo ready:

- Click **Reset**.
- Select **Hydrogen**.

Teacher's Manual and Resource Guide for Exploring the Sciences Herbert Drapkin, 1964 **Computational**

Approaches for Chemistry Under Extreme Conditions Nir Goldman, 2019-02-18 This book presents recently developed computational approaches for the study of reactive materials under extreme physical and thermodynamic conditions. It delves into cutting edge developments in simulation methods for reactive materials including quantum calculations spanning nanometer length scales and picosecond timescales to reactive force fields, coarse grained approaches and machine learning methods spanning microns and nanoseconds and beyond. These methods are discussed in the context of a broad range of fields including prebiotic chemistry in impacting comets, studies of planetary interiors, high pressure synthesis of new compounds and detonations of energetic materials. The book presents a pedagogical approach for these state of the art approaches compiled into a single source for the first time. Ultimately the volume aims to make valuable research tools accessible to experimentalists and theoreticians alike for any number of scientific efforts spanning many different types of compounds and reactive conditions. *Organic Chemistry, 5e Student Study Guide and Solutions Manual* David R.

Klein, Laurie S. Starkey, 2025-03-04 Success in organic chemistry requires mastery in two core aspects: fundamental concepts and the skills needed to apply those concepts and solve problems. With *Organic Chemistry Student Study Guide and Solutions Manual* 5th Edition, students can learn to become proficient at approaching new situations methodically based on a repertoire of skills. These skills are vital for successful problem solving in organic chemistry. **Exploring Chemistry (Loose-Leaf)**

Matthew Johll, 2012-05-04 Matthew Johll's *Exploring Chemistry* covers the standard topics for the nonmajors course in the typical order, but each chapter unfolds in the context of a single case study that helps students connect what they are learning to real life situations. For example, students work through the often difficult topics of molecular structure, gas laws and organic chemistry by learning about the development of powerful new chemotherapy drugs, new technologies for screening airline passengers and the creation of biodegradable biopolymers. It's the same case driven approach that Johll uses in his acclaimed *Investigating Chemistry* now in its Third Edition, but *Exploring Chemistry* goes beyond the other book's specific focus on examples from forensic science to use real life stories from cooking, athletics, genetics, green chemistry and more.  and sound teaching practices middle school science can capture the interest and energy of adolescent students and expand
 their understanding of the world around them Resources for Teaching Middle School Science developed by the National
 Science Resources Center NSRC is a valuable tool for identifying and selecting effective science curriculum materials that
 will engage students in grades 6 through 8 The volume describes more than 400 curriculum titles that are aligned with the
 National Science Education Standards This completely new guide follows on the success of Resources for Teaching
 Elementary School Science the first in the NSRC series of annotated guides to hands on inquiry centered curriculum
 materials and other resources for science teachers The curriculum materials in the new guide are grouped in five chapters by
 scientific area Physical Science Life Science Environmental Science Earth and Space Science and Multidisciplinary and
 Applied Science They are also grouped by type core materials supplementary units and science activity books Each
 annotation of curriculum material includes a recommended grade level a description of the activities involved and of what
 students can be expected to learn a list of accompanying materials a reading level and ordering information The curriculum
 materials included in this book were selected by panels of teachers and scientists using evaluation criteria developed for the
 guide The criteria reflect and incorporate goals and principles of the National Science Education Standards The annotations
 designate the specific content standards on which these curriculum pieces focus In addition to the curriculum chapters the
 guide contains six chapters of diverse resources that are directly relevant to middle school science Among these is a chapter
 on educational software and multimedia programs chapters on books about science and teaching directories and guides to
 science trade books and periodicals for teachers and students Another section features institutional resources One chapter
 lists about 600 science centers museums and zoos where teachers can take middle school students for interactive science
 experiences Another chapter describes nearly 140 professional associations and U S government agencies that offer
 resources and assistance Authoritative extensive and thoroughly indexed and the only guide of its kind Resources for
 Teaching Middle School Science will be the most used book on the shelf for science teachers school administrators teacher
