

# CPM SCHEDULING FOR CONSTRUCTION

## Best Practices and Guidelines

**T**his volume compiles the work coordinated by the Scheduling Excellence Initiative Committee (SEIC) to improve standardization and provide best practice guidelines for scheduling processes in the construction industry. It serves as a guide for all schedulers and planners from entry level to senior schedulers, as well as non-schedulers in management roles.

The present edition, an SEIC collaboration with the PMB Scheduling Community of Practice, provides readers with a reference guide that is like having an experienced scheduling professional at hand. The book itself is laid out in a way that follows the phases of building a project schedule, from project planning to project definition and schedule design, to development, maintenance, and usage of the schedule.

Each of these six sections, from planning through usage, is broken up into separate categories for detailed discussion and for easy reference.

- **Definition** – defining the topic term
- **Purpose** – establishing why the topic is used in the planning and scheduling process
- **Default Conditions** – establishing the conditions under which the topic is used and implemented
- **Best Practices** – establishing how the topic is used, the applications systems, and ways the topic is used, including evaluations of the various practices
- **Recommended Practices** – establishing preferred application or implementation methods, if any
- **Appendices** – establishing what should be accepted in the implementation, and providing lessons learned from that contribution

As a reference manual, *CPM Scheduling for Construction: Best Practices and Guidelines* is indispensable to avoid schedule technicians and project managers, step-by-step in the process of developing, analyzing, and maintaining a project schedule.
