

INTRODUCTION

Boom trucks are versatile machines, which can be used for many job applications from loading and unloading materials to placing those materials or personnel up to heights of 170 feet. Mounted on a truck bed these cranes can move between job sites at highway speeds carrying payloads in excess of 15,000 lbs. As with all cranes, significant training is needed to ensure safe operation and productivity.

The ultimate responsibility for each lift lies with the boom truck operator. To operate the boom truck safely and effectively, the operator must understand all the aspects of the machine, including: control locations and functions; crane movements; capacities, load charts and related data; operation speeds; signals, both visual and audible. He is also responsible for the inspection of all components and hardware on the truck and crane and have a practical knowledge of rigging and rigging hardware and be able to assess loads and situations that might present a hazard.

1. Training can reduce the risk of accidents to you and those you work with.
2. Training can also reduce the operating costs of your company by avoiding damage to the truck, property and product.

Training makes sense.
