□, Ioannis Miaoulis, Martha Cyr, Prentice Hall Direct Education Staff, 2004-04 1 Populations and Communities 2 Ecosystems and Biomes 3 Living Resources 4 Land Water and Air Resources 5 Energy Resource **The Role of Nonliving Organic Matter in the Earth's Carbon Cycle** Richard G. Zepp, Ch. Sonntag, 1995-07-11 Nonliving organic matter NLOM comprises the bulk of the organic carbon stored in the terrestrial biosphere and a major part of the organic carbon in the sea Organic substances which include litter marine detritus dissolved organic matter and soil organic matter have diverse effects on the Earth's biogeochemical processes and serve as a major reservoir of biospheric carbon which can be transformed to carbon dioxide methane and other greenhouse gases Given this broad spectrum of effects efforts to adapt to or perhaps benefit from global change require a better understanding and an ability to predict the role of NLOM in the global environment The overall objective of this volume is to provide experimental and modeling strategies for the assessment of the sensitivity of the global carbon cycle to changes in nonliving organic pools in terrestrial and aquatic ecosystems The discussions in this volume consider how best to characterize and quantify pools and fluxes of NLOM the role of NLOM cycling on a global scale human and climatic perturbations of interactions between NLOM and nutrients and biological chemical and physical processes that control the production and degradation of NLOM with an emphasis on processes that affect the persistence of NLOM in the environment One of the most unique aspects of this volume is that it represents extensive exchanges between leading international scientists from both aquatic and terrestrial backgrounds It will be of particular interest to organic geochemists microbiologists ecologists soil scientists agricultural scientists marine chemists limnologists and modelers Goal of this Dahlem Workshop to devise experimental and modeling strategies for assessment of the sensitivity of the global carbon cycle to changes in nonliving organic pools **Nutrient Cycling and Plant Nutrition in Forest Ecosystems** Scott X. organic matter OM in agricultural productivity C and N transformation in soil biological nitrogen fixation BNF and its genetics plant growth promoting rhizobacteria PGPRs PGPRs and their role in sustainable agriculture organic agriculture etc The book's main objectives are 1 to explain in detail the role of C and N cycling in sustaining agricultural productivity and its importance to sustainable soil management 2 to show readers how to restore soil health with C and N and 3 to help them understand the matching of C and N cycling rules from a climatic perspective Given its scope the book offers a valuable resource for educators researchers and policymakers as well as undergraduate and graduate students of soil science soil microbiology agronomy ecology and the environmental sciences Gathering cutting edge contributions from internationally respected researchers it offers authoritative content on a broad range of topics which is supplemented by a wealth of data tables figures and photographs Moreover it provides a roadmap for sustainable approaches to food and nutritional security and to soil sustainability in agricultural systems based on C and N cycling in soil systems *Wetland Techniques* James T. Plant Diversity and Ecology in the Chihuahuan Desert Maria C. Mandujano, Irene Pisanty, Luis E. Eguiarte, 2020-07-18 Environmental and specific diversity in the Chihuahuan desert in general and in the Cuatro Ci negas Basin in particular has long been recognized as outstanding This book provides a global ecological overview together with in depth studies of specific processes The Chihuahuan desert is the warmest in North America and has a complex geologic climatic and biogeographical history which affects today s distribution of vegetation and plants and generates complex phylogeographic patterns The high number of endemic species reflects this complex set of traits The modern distribution of environments including aquatic and subaquatic systems riparian environments gypsum dunes and gypsum rich soils low levels of phosphorous and organic matter and high salinity combined with an extreme climate call for a range of adaptations Plants are distributed in a patchy pattern based on punctual variations and many of them respond to different resources and conditions with considerable morphological plasticity In terms of physiological morphological and ecological variability cacti were identified as the most important group in specific environments like bajadas characterized by high diversity values while gypsophytes and gypsovagues of different phylogenies including species with restricted distribution and endemics
