The student version of this activity available in these formats:

[Google Doc File](#) - for in - person learning

[PDF Version](#) for printing

Answer Key - In Person Version

1. "Woe to that child which when kissed on the forehead tastes salty. He is bewitched and soon will die" This is an old saying from the eighteenth century and describes one of the symptoms of CF (salty skin). Why do you think babies in the modern age have a better chance of survival than babies in the 18th century?

Modern medicine, patients have access to antibiotics and respiratory therapy and drugs

2. What symptoms lead Dr. Weyland to his initial diagnosis? wheezing and salt crystals on the skin

3. Consider the graph of infections, which organism stays relatively constant in numbers over a lifetime. What organism is most likely affecting baby Zoey? *B. copacra* stays constant, for Zoey's age, staph is most likely causing the problem

4. What do you think is the most dangerous time period for a patient with CF? Justify your answer. 11-24 is where there is a large number of bacteria present, staph and pseudomonas at the same time

Part II: CF is a disorder of the cell membrane.

5. Suggest a molecular fix for a mutated CFTR channel. How would you correct it if you had the ability to tinker with it on a molecular level? Answers vary, since the channel is blocked, suggest to unblock the channel or keep it open in some way

6. Why would treatment that targets the CFTR channel not be effective for 5% of those with cystic fibrosis? 5% of the patients don't have the channel protein at all

7. Sweat glands cool the body by releasing perspiration (sweat) from the lower layers of the skin onto the surface. Sodium and chloride (salt) help carry water to the skin's surface and are then reabsorbed into the body. Why does a person with cystic fibrosis have salty tasting skin? the salt is not being reabsorbed into the body due to missing channels
