## Introduction

The D-Link DP-301P+ Print Server is a pocket size print server that connects to your Ethernet/Fast Ethernet network anywhere you wish to locate printer services. The DP-301P+ manages the flow of print files from workstations or file servers to connected printers, delivering print jobs to printers much faster than a file server or a PC acting as a print server.

The DP-301P+ includes easy-to-use software to install on most Windows-based networks. Protocol support for TCP/IP, NetBEUI, and AppleTalk are provided to ensure seamless connection to major networking operating systems.

The DP-301P+ has a built in Web-based management feature that allows users to easily configure and manage multiple print queues through TCP/IP. The DP-301P+ also supports Telnet as an alternative method to configure the unit.

The DP-301P+ improves network printing services in the following ways:

- The DP-301P+ manages print file traffic. This provides workload relief to your file servers, and allows the file servers' full capacity to be used for file access or other direct services to network users. On Peer-to-Peer networks, workstations can print directly to the print server without increasing the load of another workstation or server.
- Because the DP-301P+ is very portable and inexpensive compared to a PC-based print server, and the print server connects to your file servers through the network, printers can be deployed to locations of maximum convenience to users.
