Assembly of the Photosystem II Membrane-Protein Complex of Oxygenic Photosynthesis Julian J. Eaton-Rye, Roman Sobotka, 2017-08-08 Photosystem II is a 700 kDa membrane protein super complex responsible for the light driven splitting of water in oxygenic photosynthesis The photosystem is comprised of two 350 kDa complexes each made of 20 different polypeptides and over 80 co factors While there have been major advances in understanding the mature structure of this photosystem many key protein factors involved in the assembly of the complex do not appear in the holoenzyme The mechanism for assembling this super complex is a very active area of research with newly discovered assembly factors and subcomplexes requiring characterization Additionally the ability to split water is inseparable from light induced photodamage that arises from radicals and reactive O₂ species generated by Photosystem II chemistry Consequently to sustain water splitting a self repair cycle has evolved whereby damaged protein is removed and replaced so as to extend the working life of the complex Understanding how the biogenesis and repair processes are coordinated is among several important questions that remain to be answered Other questions include how and when are the inorganic cofactors inserted during the assembly and repair processes and how are the subcomplexes protected from photodamage during assembly Evidence has also been obtained for Photosystem II biogenesis centers in cyanobacteria but do these also exist in plants Do the molecular mechanisms associated with Photosystem II assembly shed fresh light on the assembly of other major energy transducing complexes such as Photosystem I or the cytochrome b₆ f complex or indeed other respiratory complexes The contributions to this Frontiers in Plant Science Research Topic are likely to reveal new details applicable to the assembly of a range of membrane protein complexes including aspects of self assembly and solar energy conversion that may be applied to artificial

photosynthetic systems In addition a deeper understanding of Photosystem II assembly particularly in response to changing environmental conditions will provide new knowledge underpinning photosynthetic yields which may contribute to improved food production and long term food security

The Art of Computer Programming Donald E. Knuth, 2022-10-11 The Art of Computer Programming is Knuth's multivolume analysis of algorithms With the addition of this new volume it continues to be the definitive description of classical computer science Volume 4B the sequel to Volume 4A extends Knuth's exploration of combinatorial algorithms These algorithms are of keen interest to software designers because a single good idea can save years or even centuries of computer time The book begins with coverage of Backtrack Programming together with a set of data structures whose links perform delightful dances and are ideally suited to this domain New techniques for important applications such as optimum partitioning and layout are thereby developed Knuth's writing is playful and he includes dozens of puzzles to illustrate the algorithms and techniques ranging from popular classics like edge matching to more recent crazes like sudoku Recreational mathematicians and computer scientists will not be disappointed In the second half of the book Knuth addresses Satisfiability one of the most fundamental problems in all of computer science Innovative techniques developed at the beginning of the twenty first century have led to game changing applications for such things as optimum scheduling circuit design and hardware verification Thanks to these tools computers are able to solve practical problems involving millions of variables that only a few years ago were regarded as hopeless The Mathematical Preliminaries Redux section of the book is a special treat which presents basic techniques of probability theory that have become prominent since the original preliminaries were discussed in Volume 1 As in every volume of this remarkable series the book includes hundreds of exercises that employ Knuth's ingenious rating system making it easy for readers of varying degrees of mathematical training to find challenges suitable to them Detailed answers are provided to facilitate self study Professor Donald E Knuth has always loved to solve problems In Volume 4B he now promotes two brand new and practical general problem solvers namely 0 the Dancing Links Backtracking and 1 the SAT Solver To use them a problem is defined declaratively 0 as a set of options or 1 in Boolean formulae Today's laptop computers heavily armoured with very high speed processors and ultra large amounts of memory are able to run either solver for problems having big input data Each section of Volume 4B contains a multitudinous number of tough exercises which help make understanding surer Happy reading Eiiti Wada an elder computer scientist UTokyo Donald Knuth may very well be a great master of the analysis of algorithms but more than that he is an incredible and tireless storyteller who always strikes the perfect balance between theory practice and fun Volume 4B Combinatorial Algorithms Part 2 dives deep into the fascinating exploration of search spaces which is quite like looking for a needle in a haystack or even harder to prove the absence of a needle in a haystack where actions performed while moving forward must be meticulously undone when backtracking It introduces us to the beauty of dancing links for removing and restoring the cells of a matrix in a dance which is both simple to implement and very efficient Christine Solnon
