

ENGINE LUBRICATION

The engine lubrication is of the wetsump method to draw up the oil forced by the oil pump. The oil pump is of a trochoid type, and mounted on crankshaft at crank shaft pulley side. Oil is drawn up through oil pump strainer and passed through pump to oil filter. The filtered oil flows into two paths in cylinder block. In one path, oil reaches crankshaft journal bearings. Oil from crankshaft journal bearings is supplied to connecting rod bearings by means of intersecting passages drilled in crankshaft, and then injected from a small hole provided on big end of connecting rod to lubricate piston, rings, and cylinder wall. In another path, oil goes up to cylinder head and lubricates rocker arm, valve, camshaft, etc. through the oil hole provided on the rocker arm shaft.
