DeGarmo's Materials and Processes in Manufacturing J. T. Black, Ronald A. Kohser, 2020-07-21

Guiding engineering and technology students for over five decades, DeGarmo's *Materials and Processes in Manufacturing* provides a comprehensive introduction to manufacturing materials, systems and processes. Coverage of materials focuses on properties and behavior, favoring a practical approach over complex mathematics. Analytical equations and mathematical models are only presented when they strengthen comprehension and provide clarity. Material production processes are examined in the context of practical application to promote efficient understanding of basic principles. Broad coverage of manufacturing processes illustrates the mechanisms of each while exploring their respective advantages and limitations. Aiming for both accessibility and completeness, this text offers introductory students a comprehensive guide to material behavior and selection, measurement and inspection, machining, fabrication, molding, fastening and other important processes using plastics, ceramics, composites and ferrous and nonferrous metals and alloys. This extensive overview of the field gives students a solid foundation for advanced study in any area of engineering, manufacturing and technology.

Introduction to Aerospace Materials Adrian P. Mouritz, 2012-05-23

The structural materials used in airframe and propulsion systems influence the cost, performance and safety of aircraft, and an understanding of the wide range of materials used and the issues surrounding them is essential for the student of aerospace engineering. *Introduction to Aerospace Materials* reviews the main structural and engine materials used in aircraft, helicopters and spacecraft in terms of their production, properties, performance and applications. The first three chapters of the book introduce the reader to the range of aerospace materials, focusing on recent developments and requirements. Following these introductory chapters, the book moves on to discuss the properties and production of metals for aerospace structures, including chapters covering strengthening of metal alloys, mechanical testing and casting, processing and machining of aerospace metals. The next ten chapters look in depth at individual metals, including aluminium, titanium, magnesium, steel and superalloys, as well as the properties and processing of polymers, composites and wood. Chapters on performance issues such as fracture, fatigue and corrosion precede a chapter focusing on inspection and structural health monitoring of aerospace materials. Disposal, recycling and materials selection are covered in the final two chapters. With its comprehensive coverage of the main issues surrounding structural aerospace materials, *Introduction to Aerospace Materials* is essential reading for undergraduate students studying aerospace and aeronautical engineering. It will also be a valuable resource for postgraduate students and practising aerospace engineers. Reviews the main structural and engine materials used in aircraft, helicopters and spacecraft in terms of their properties, performance and applications. Introduces the reader to the range of aerospace materials, focusing on recent developments and requirements, and discusses the properties and
