Dreamliner 787 Special Features, Passenger Compartment, Cockpit Area Jon Schiller, Dr, PhD,Jon Schiller, Ph.d.,2013-05-04 When I was an Aerospace Executive responsible for overseas sales to Iran and Israel I had to do a lot of overseas travel by airliner so I wanted to write this book to learn how airline travel has improved since the mid 1980s Later the vice president to whom I reported offered me the Israeli business if I was willing to form my own company I eagerly accept his offer and established a company specializing in designing Guidance and Control Systems for Military Aircraft which was basically funded by the profits from the Israeli business One of the consulting contracts of my company was to spend several months in Taiwan designing a new guidance and control system for their new Ultra Fighter Aircraft to help defend them against their enemies at that time ch less expensive than conventional old fashioned At the Autonetics Division of Rockwell I was Chief Engineer responsible for the F111 Avionics system built by General Dynamics Fort Worth with Avionics supplied by Autonetics This avionic system included a fly by wire system with duplicate Airborne Computers to perform all the computations required by the Avionics systems including the first GPS installed on a military aircraft A second reason I wanted to write this book is that I learned that the Dreamliner has some of the features first used on the F111 for which I designed the Guidance and Control This book includes a description of the similar features used by the Dreamliner I realize that the advent of Nanotechnology used in the Dreamliner electronics makes it quite different than the electronics of the F111 time period For example GPS navigation is included as a function on handheld smartphones in the nanotechnology era rather a PC computer sized box used on the F111 Another important factor is cost nanotechnology electronics are muelectronics **Dreamliner** ,2016 **The Boeing Company** Andres Carrillo,Daniel Portilla,James S. O'Rourke,2013 On January 16 2013 Boeing had its newest and most advanced aircraft the 787 Dreamliner grounded worldwide due to fires that started in the airplanes batteries The Lithium Ion technology used in the 787 aircraft was a new feature used in commercial aircraft as a solution to save weight Several prior delays had already affected the introduction of the Dreamliner 787 one of the most revolutionary planes to date Boeing is faced with high demand costs and pressure to respond quickly while responding to both safety concerns and general industry concerns and loss of revenue **Boeing 787 Dreamliner** Nigel Richardson,2026-04-15 The Boeing 787 Dreamliner is a family of long range mid size wide body twin engine jet airliners that can accommodate 242 330 passengers in a typical two class seating configuration The airliner features a high degree of technological innovation in design concepts construction materials and control systems It is the

world's first major commercial airliner to have a fuselage wings and tail made from composite materials. The variable camber wings with raked wing tips lead to a high cruising speed and reduced fuel consumption. The airliner makes extensive use of electrical systems in place of many pneumatic components; it has an advanced fly-by-wire control system which automatically optimises the wing's configuration for maximum efficiency, and new technologies are used for the flight deck instrumentation. The aircraft is powered by next-generation engines: General Electric GEnx 1B or the Rolls-Royce Trent 1000. Three variants have been built: the initial 787-8, a stretched 787-9 variant, and the largest variant, the 787-10. The 787 first entered service with ANA on 26 October 2011. It is now operated worldwide by over seventy airlines, including major flag carriers, low-cost long-haul operators, and leisure airlines. Nigel Richardson describes the evolution, design, and development of the Boeing 787 Dreamliner, with high-quality illustrations and technical information.
