## INSTALLATION

### Step 1—Check Equipment and Job Site

**UNPACK UNIT** — Move to final location. Remove cartons taking care not to damage unit.

**INSPECT EQUIPMENT** — File claim with shipping company prior to installation if shipment is damaged or incomplete. Locate unit rating plate on unit service panel. (See Fig. 2.) It contains information needed to properly install unit. Check rating plate to be sure unit matches job specifications.

### Step 2—Install on a Solid, Level Mounting Pad

If conditions or local codes require the unit be attached to a pad, tie down bolts should be used and fastened through knockouts

provided in unit base pan. Refer to unit mounting pattern shown in Fig. 2 to determine base pan size and knockout hole location.

On rooftop applications, mount on level platform or frame. Place unit above a load-bearing wall and isolate unit and tubing set from structure. Arrange supporting members to adequately support unit and minimize transmission of vibration to building. Consult local codes governing rooftop applications.

Roof mounted units exposed to winds above 5 mph may require wind baffles. Consult Low-Ambient Guideline for wind baffle construction.

**NOTE:** Unit must be level to within  $\pm 2^\circ$  per compressor manufacturer specifications.
