Introduction

This manual provides technical information necessary for servicing the EVX-5300/-5400 UHF Digital/Analog Mobile Transceiver.

Service this equipment requires expertise in handling surface-mount chip components. Attempts by non-qualified persons to service this equipment may result in permanent damage not covered by the warranty, and may be illegal in some countries.

Two PCB layout diagrams are provided for each model, which circuit board is not transceiver. Each side of a board is referred to by the type of the majority of components installed on that side: "topside" or "bottomside". In most cases one side has only chip components, and the other has either a mixture of both chip and leaded components (transistors, coils, electrolytic capacitors, ICs, etc.), or leaded components only.

As described in the pages to follow, the address of this transceiver design of the EVX-5300/-5400 allows a complete alignment of this transceiver to the performance without opening the case of the radio; all adjustments can be performed from the personal computer using with the Vertex Standard PDI-121 USB Programming Interface and CS-42 Software.

While we believe the technical information in this manual to be correct, Vertex Standard assumes no liability for damage that may occur as a result of typographical or other errors that may be present. Your cooperation in pointing out any inaccuracies in the technical information would be appreciated.

Important Note

This transceiver is assembled using Pb-free (low solder) based on the RoHS specification.

Only lead-free solder (AFLUX Composition: 60/40 Ag/30Cu) should be used for repairs performed on this apparatus. The solder stated above provides the alloy composition required for compliance with the lead-free specifications, and any solder with the above alloy composition may be used.
