The Global Carbon Cycle Christopher B. Field, Michael R. Raupach, 2012-09-26 While a number of gases are implicated in global warming carbon dioxide is the most important contributor and in one sense the entire phenomena can be seen as a human induced perturbation of the carbon cycle The Global Carbon Cycle offers a scientific assessment of the state of current knowledge of the carbon cycle by the world's leading scientists sponsored by SCOPE and the Global Carbon Project and other international partners It gives an introductory overview of the carbon cycle with multidisciplinary contributions covering biological physical and social science aspects Included are 29 chapters covering topics including an assessment of carbon climate human interactions a portfolio of carbon management options spatial and temporal distribution of sources and sinks of carbon dioxide socio economic driving forces of emissions scenarios Throughout contributors emphasize that all parts of the carbon cycle are interrelated and only by developing a framework that considers the full set of feedbacks will we be able to achieve a thorough understanding and develop effective management strategies The Global Carbon Cycle edited by Christopher B Field and Michael R Raupach is part of the Rapid Assessment Publication series produced by the Scientific Committee on Problems of the Environment SCOPE in an effort to quickly disseminate the collective knowledge of the world's leading experts on topics of pressing environmental concern

Emerge Tobie Easton, 2016-04-19 Lia Nautilus may be a Mermaid but she's never lived in the ocean War has ravaged the seven seas ever since the infamous Little Mermaid unleashed a curse that stripped Mer of their immortality Lia has grown up in a secret community of land dwelling Mer hidden among Malibu's seaside mansions Her biggest problems are surviving P E and keeping her feelings for Clay Ericson in check Sure he's gorgeous in that cocky leather jacket sort of way and makes her feel like there's a school of fish swimming in her stomach but getting involved with a human could put Lia's entire community at risk So it's for the best that he's dating that new girl right That is until Lia finds out she isn't the only one at school keeping a potentially deadly secret And this new girl Her eyes are dead set on Clay who doesn't realize the danger he's in If Lia hopes to save him she'll have to get closer to Clay Lia's parents would totally flip if they found out she was falling for a human boy but the more time she spends with him the harder it is for her to deny her feelings After making a horrible mistake Lia will risk everything to stop Clay from falling in love with the wrong girl

The Changing Carbon Cycle John R. Trabalka, David E. Reichle, 2013-03-09 The United States Government cognizant of its responsibilities to future generations has been sponsoring research for nine years into the causes effects and potential impacts of increased concentrations of carbon dioxide CO₂ in the atmosphere Agencies such as the National Science Foundation National Oceanic and Atmospheric Administration and the U S Department of Energy DOE cooperatively spent about 100 million from FY 1978 through FY 1984 directly on the study of CO₂ The DOE as the 2 lead government agency for coordinating the government's research efforts has been responsible for about 60% of these research efforts William James succinctly defined our purpose when he stated science must be based upon irreducible and stubborn

facts Scientific knowledge can and will reduce the present significant uncertainty surrounding our understanding of the causes effects and potential impacts of increasing atmospheric CO₂ We have come far during the past seven years in resolving some underlying doubts and in narrowing the ranges of disagreement Basic concepts have become less murky Yet much more must be accomplished more irreducible and stubborn facts are needed to reduce the uncertainties so that we can improve our knowledge base Uncertainty can never be reduced to zero However with a much improved knowledge base we will be able to learn understand and be in a position to make decisions

Microbial Role in the Carbon Cycle in Tropical Inland Aquatic Ecosystems André Megali Amado, Fábio Roland, 2017-03-15 Aquatic microorganisms are tidily related to the carbon cycle in aquatic systems especially in respect to its accumulation and emission to atmosphere In one hand the autotrophs are responsible for the carbon input to the ecosystems and trophic chain On the other hand the heterotrophs traditionally play a role in the carbon mineralization and since microbial loop theory may play a role to carbon flow through the organisms However it is not yet clear how the heterotrophs contribute to carbon retention and emission especially from tropical aquatic ecosystems Most of the studies evaluating the role of microbes to carbon cycle in inland waters were performed in high latitudes and only a few studies in the tropical area In the prospective of global changes where the warm tropical lakes and rivers become even warmer it is important to understand how microorganisms behave and interact with carbon cycle in the Earth region with highest temperature and light availability This research topic documented microbial responses to natural latitudinal gradients spatial within and between ecosystems gradients temporal approaches and temperature and nutrient manipulations in the water and in the sediment

Monograph Series Volume 183 For carbon sequestration the issues of monitoring risk assessment and verification of carbon content and storage efficacy are perhaps the most uncertain Yet these issues are also the most critical challenges facing the broader context of carbon sequestration as a means for addressing climate change In response to these challenges Carbon Sequestration and Its Role in the Global Carbon Cycle presents current perspectives and research that combine five major areas The global carbon cycle and verification and assessment of global carbon sources and sinks Potential capacity and temporal spatial scales of terrestrial oceanic and geologic carbon storage Assessing risks and benefits associated with terrestrial oceanic and geologic carbon storage Predicting monitoring and verifying effectiveness of different forms of carbon storage Suggested new CO₂ sequestration research and management paradigms for the future The volume is based on a Chapman Conference and will appeal to the rapidly growing group of scientists and engineers examining methods for deliberate carbon sequestration through storage in plants soils the oceans and geological repositories **McGraw-Hill**
