1.2 Background of the Problem

It is clearly known that software systems have played a great role to a lot of companies in this era. The business processes have become so much involved with systems of a computer that a break down or interruption of the essential software system can cause loss of huge amount (Fahmi and Choi, 2007).

Nowadays, many companies are working on old systems. . Software maintenance, reverse engineering, quality assessment, components recycle and integration are only a few examples of software engineering activities relating old systems. A fundamental aspect related to all these processes is identification of artifacts used in a system and interpretation of relationships among them (Canfora and Di Penta, 2007).

Forward and Inverse Modeling Using Meshless Method for NDE Application Xin Liu, 2009 NDT Data Fusion Xavier Gros, 1996-11-01 Data fusion is a rapidly developing technology which involves the combination of information supplied by several NDT Non Destructive Testing sensors to provide a more complete and understandable picture of structural integrity This text is the first to be devoted exclusively to the concept of multisensor integration and data fusion

applied to NDT The advantages of this methodology are widely acknowledged and the author presents an excellent introduction to data fusion processes Problems are approached progressively through detailed case studies offering practical guidance for those wishing to develop and explore NDT data fusion further This book will prove invaluable to inspectors students and researchers concerned with NDT signal processing measurements and testing It shows the great value and major benefits which can be achieved by implementing multisensor data fusion not only in NDT but also in any discipline where measurements and testing are key activities *Forensic Engineering* Kevin L.
