Massachusetts Institute of Technology Nobel Laureate in Economics 1987 Professor Hiroshi Yoshikawa provides a unique synthesis of statistical physics and macro economic theory in order to confront the dismal failure in economics and in finance to understand how an economy or a financial market works given the heterogeneous decision making of many different individual interacting actors Economics has failed in this regard with the naive and often misleading concept of representative agents The author presents many insights on the historical development concepts and errors made by the most illustrious economists in the past This book should be essential readings for any economics students as well as academic researchers and policy makers who should learn to bring back good sense thinking in their impactful decisions
