discipline Biology: How Life Works (Volume 1) James Morris,2013-01-04 Ordinarily textbooks are developed by first
writing chapters then making decisions about art and images and finally once the book is complete assembling a test bank
and ancillary media This process dramatically limits the integration across resources and reduces art media and assessments
to ancillary material rather than essential resources for student learning Biology How Life Works is the first project to
develop three pillars the text the visual program and the assessment at the same time All three pillars were developed in
parallel to make sure that each idea is addressed in the most appropriate medium and to ensure authentic integration These
three pillars are all tied to the same set of core concepts share a common language and use the same visual palette In this
way the text visual program and assessments are integral parts of student learning rather than just accessories to the text
