

Chapter 10: Photosynthesis

- 10.1 Describe the roles of autotrophs and heterotrophs in the biosphere.*
- 10.2 Specify where photosynthesis occurs and describe, in general, how it converts light energy into chemical energy.*
- 10.3 Trace the sequence of events during the light reactions that convert solar energy to chemical energy.*
- 10.4 Explain how the Calvin cycle uses the chemical energy of ATP and NADPH to reduce CO_2 to sugar.*
- 10.5 Identify alternative mechanisms of carbon fixation that have evolved in hot, arid climates.*
- 10.6 Describe photosynthesis and explain why all life on Earth depends on this process.*

This chapter is as challenging as the one you just finished on cellular respiration. However, conceptually it will be a little easier because the concepts learned in Chapter 9—namely, chemiosmosis and an electron transport system—will play a central role in photosynthesis. During your study of Chapters 9 and 10, consider how they are related in their transfer of energy and matter.

Study Tip: First, get a big picture view of photosynthesis by working through Figures 10.1 and 10.3. Notice from Figure 10.1 that some plant cells have chloroplasts but almost all plant cells have mitochondria. Use Figure 10.3 to consider the amazing details of photosynthesis inside chloroplasts in the context of the entire plant. Finally, turn back to p. 164, Figure 9.1, to reinforce how the processes of photosynthesis and cellular respiration are related.

Keep in mind that plants have *both* mitochondria and chloroplasts and do both cellular respiration and photosynthesis!

Concept 10.1 Photosynthesis feeds the biosphere

LO 10.1: *Describe the roles of autotrophs and heterotrophs in the biosphere.*

1. Define *autotrophs* and *heterotrophs*. Which are the *producers* of the ecosystem? Which are the *consumers*? Give an example of each group.

Chapter 10 Photosynthesis Reading Guide:

Instructor's Guide for Campbell's Biology Nina Caris, Harold T. Underwood, 1996 **Botany** James D. Mauseth, 2003
Botany An Introduction to Plant Biology Third Edition provides an updated thorough overview of the fundamentals of botany. The topics and chapters are organized in a sequence that is easy to follow beginning with the most familiar structure and proceeding to the less familiar metabolism then finishing with those topics that are probably the least familiar to most beginning students: genetics, evolution, the diversity of organisms, and ecology. **Essential Biochemistry** Charlotte W. Pratt, Kathleen Cornely, 2021-03-23
Essential Biochemistry 5th Edition is comprised of biology pre-med and allied health topics and presents a broad but not overwhelming base of biochemical coverage that focuses on the chemistry behind the biology. This revised edition relates the chemical concepts that scaffold the biology of biochemistry, providing practical knowledge as well as many problem-solving opportunities to hone skills. Key Concepts and Concept Review features help students to identify and review important takeaways in each section. **Introduction to the Physical and Biological Oceanography of Shelf Seas** John H. Simpson, Jonathan Sharples, 2012-03-29
In this exciting and innovative textbook, two leading oceanographers bring together the fundamental physics and biology of the coastal ocean in a quantitative but accessible way for undergraduate and graduate students. Shelf sea processes are comprehensively explained from first principles using an integrated approach to oceanography that helps build a clear understanding of how shelf sea physics underpins key biological processes in these environmentally sensitive regions. Using many observational and model examples, worked problems, and software tools, the authors explain the range of physical controls on primary biological production and shelf sea ecosystems. Boxes throughout the book present extra detail for each topic, and non-mathematical summary points are provided for physics sections, allowing students to develop an intuitive understanding. The book is fully supported by extensive online materials, including worked solutions to end-of-chapter exercises, additional homework, exam problems with solutions, and simple MATLAB and FORTRAN models for running simulations. **Biology** Gerhart Campbell, 2000-09
Reading Skills for Success Thomas Albin Upton, 2004
Expand text-based processing skills by developing understanding of word-level clues and recognising different types of text structures and genres. Suitable for self-study, building vocabulary, and developing reading skills. **Biomimetics** Raz Jelinek, 2013-06-26
Biological systems have always inspired mankind in the creation of new systems and technologies. In recent years, the interface between the biological and non-biological worlds appears increasingly blurred due to significant advances both in our understanding of biological phenomena as well as the development of sophisticated means to manipulate molecular systems for varied applications. Biomimetics as a distinct discipline shows how biology and biological processes are manifested in diverse aspects of chemistry, physics, and engineering. This book aims to methodically describe artificial and synthetic assemblies mimicking biological and living systems, from biomaterials to drug discovery to microelectronics and computer sciences. *Governance of Radioactive*
