Electrical overview

The vehicle operates on a 12-volt direct current (DC) negative-ground system. Power is supplied by a lead-acid battery in right side of the trunk or cargo compartment.

A voltage regulator controls system voltage at approximately 12 volts. All circuits are grounded by direct or indirect connection to the negative (-) terminal of the battery.

A number of ground connections throughout the vehicle connect the wiring harness to chassis ground. These circuits are completed by the battery cable or ground strap between the body and the battery negative (-) terminal.
