1. To use the two-sample  $t$  procedure to perform a significance test on the difference between two means, we assume that
  - (a) the populations' standard deviations are known.
  - (b) the samples from each population are independent.
  - (c) the distributions are exactly Normal in each population.

In a large midwestern university (the class of entering freshmen being on the order of 6000 or more students), an SRS of 100 entering freshmen in 1993 found that 20 finished in the bottom third of their high school class. Admission standards at the university were tightened in 1995. In 1997 an SRS of 100 entering freshmen found that 10 finished in the bottom third of their high school class.   - (e) If we reject  $H_0$  at the  $\alpha = 0.05$  significance level based on these results, we have a 5% chance of being wrong.
