Entrepreneurship in China Keming Yang, 2016-04-29 The emergence of China as a major world economy is of great importance to the global political economy and to international business There has been much research on the macro level of institutional reform but little detailed work on the grassroots level of entrepreneurship in China This innovative book addresses this gap by investigating how an economic system dominated by central plans communist ideologies and suppressing bureaucracies could generate such energy from the bottom of society fuelling the country s economic growth Keming Yang s theory of entrepreneurship is based on two interrelated concepts double entrepreneurship and institutional holes He argues that the two concepts bridge a gap between the neo classical institutionalism of economic development and entrepreneurship studies that emphasize individual choice The rigorous theoretical framework is supported by substantial empirical research offering statistical analyses of survey data as well as detailed case studies This timely book will appeal to an interdisciplinary readership in sociology economics business studies and Chinese and Asian Studies **Literary Digest:**

Neoliberal Transformation of Electricity Serhan Ünal, 2023-05-02 This book makes a structural analysis of the neoliberal restructuring in the global electricity industry The book shows that the electricity liberalisation in different countries is just a reflection of the same structural trend in the global economy and avoids from both narrow country specific and abstract global approaches by making a structural analysis completed by a case study Thus it aims reaching wider conclusions about how global changes in finance and ideology knowledge structures influence domestic energy and economic policy preferences of developing countries The book develops a taxonomy about organising principles around which the electricity industry has been structured historically and globally and reveals drivers of change which influences the current energy transition in the electricity sector Combining these aspects the book uses financial and other economic data empirically to shed light on the structural role of global transformation of the electricity markets on the domestic energy policy preferences of the developing countries Thus this work will be useful not only for academic purposes but also for practitioners dealing with these issues

Discovering Chinese Nationalism in China Yongnian Zheng, 1999-04-28 This book explores the revival of Chinese nationalism in the 1990s and analyses the ways in which the West deals with this phenomenon Yongnian Zheng discusses the complicated nature of China's new nationalism and presents the reader with a very different picture to that portrayed in Western readings of Chinese nationalism He argues that China's new nationalism has been a reaction to changes in the country's international circumstances and can be regarded as a voice over the existing unjustified international order Zheng shows that the present Chinese leadership is pursuing strategies not to isolate China but to integrate it into the international community Based on the author's extensive research in China the book provides a set of provocative arguments against prevailing Western attitudes to and perceptions of China's nationalism
