

# Volcanoes and Plate Tectonics

Volcanic belts form along the boundaries of Earth's plates.

- At plate boundaries large pieces of earth's crust diverge (pull apart) or converge (push together) -- as a result, the crust often breaks (fractures) and allows magma to reach the surface.

- Some volcanoes result from "hot spots" in the Earth's mantle....a hot spot is an area where material flows deep within the mantle rises and then melts, forming magma. A volcano forms above a hot spot where magma erupts through the crust and reaches the surface. Some hot spot volcanoes form in the middle of plates far from plate boundaries and other hot spots occur near plate boundaries.

## "Hotspot" Volcano
