The Network Challenge (Chapter 6) Sonia Kleindorfer, James G. Mitchell, 2009-05-19 Biology remains the most extensive and complex information network on the planet This chapter examines the nature of biological networks including their inherent stability and risks to their resilience After a general introduction exploring networks and biological systems this chapter reviews 1 the evolution of biological networks 2 principles that govern biological networks and 3 measures of stability productivity and efficiency in biological networks The authors use examples from food energy transfer in rainforests and coral reefs as well as the creation of a biological network through colonization in Darwin s Finches of the Galapagos Islands Research shows that while large biological networks are inherently unstable some are more stable than others

Earth System Sciences Committee, 1986      **The Blue Economy in Sub-Saharan Africa** DONALD SPARKS, 2021-06-16 The blue economy comprising coastal and marine resources offers vast benefits for sub Saharan Africa of the 53 countries and territories in the region 32 are coastal states there are 13 million sq km of maritime zones more than 90% of the region s exports and imports come by sea and the African Union hails the blue economy as the new frontier of African renaissance Despite their importance the region s coastal and marine resources have been neither fully appreciated nor fully utilized They are only now

being recognized as being key to Africa's potential prosperity. As the region grows it has in general not taken adequate safeguards to protect these valuable resources. That is partly because some of the problems, pollution for example, are regional and know no borders. All too often short-term gains are made at the expense of the long-term, overfishing for example. This book provides for the first time a study of the constraints and opportunities the blue economy offers for sub-Saharan Africa. It includes an introduction and overview, sectoral analyses including tourism, fisheries, mineral resources, culture, shipping and maritime safety, country case studies and analyses of regional and international efforts towards better coastal zone and marine management.

But how does this network operate? How do its key components interact and how is it regulated? How is human activity affecting these interactions and at what cost? *Introducing Environment* takes the reader on a guided tour of some of the major environmental issues of our time. Starting with the thin layer of life upon our planet, the biosphere, it explains ecological concepts such as species, food chain, ecosystem and biodiversity. From that biological basis it describes interrelationships between plants, animals and the wider environment with short case studies and examples. Then the reader learns about the unique role of humans, showing the ways in which we have changed the environment to suit our needs and using historical and contemporary case studies to show the impact of human activities. The later chapters of the book move onto a more technological approach, looking at how we can tell what effect current lifestyles have upon the environment. Next, sustainability is introduced to indicate a few of the major factors with examples of successful schemes to reduce environmental impact. The book ends with the question: what next? giving the reader a chance to consider the different zones of influence: personal, local, corporate, national and international, that are involved in the complexity of addressing environmental problems. *Introducing Environment* does not pretend to be an all-encompassing tome but awakens interest and provokes thought to stimulate further debate and study. It is the ideal text for anyone new to environmental science and ecology looking to master the essentials in a quick, straightforward way.
