Chapter The Biosphere Wordwise:

The Biosphere Ian K. Bradbury, 1994-04-01 The Biosphere Second Edition Ian K Bradbury Department of Geography University of Liverpool UK The Biosphere provides a comprehensive introductory overview of functional historical and geographical aspects of the living world It has been written particularly for first and second year students of geography and environmental science in higher education with little background in biology but whose interests in the environment and environmental problems requires some knowledge of organisms and ecosystems The first part of the book provides an accessible introduction to life on earth covering such key topics as levels of organization in the biosphere the chemical make up of organisms and energy and life The second part of the book emphasizes functional aspects of the biosphere particularly the ways in which organisms acquire and process energy and materials and how these are transferred through ecological systems Special attention is paid to applied aspects particularly crop and livestock production The third part of the book provides an overview of the history of life on earth emphasizing major evolutionary events and their significance for the biosphere This part begins with a consideration of life s origins and concludes with a section on the evolution of hominids The fourth part of the book focuses on geographical aspects of the biosphere The principles of species distribution are discussed and different approaches to the zonation of the biota are introduced A final chapter deals with biodiversity emphasizing its geographical variation Throughout The Biosphere the links between natural processes and environmental issues such as pollution climatic change and conservation are emphasized The extensive use of cross referencing makes this book very helpful for the non specialist

Primary Productivity of the Biosphere H. Lieth, R.H. Whittaker, 2012-12-06 The period since World War II and especially the last decade influenced by the International Biological Program has seen enormous growth in research on the function of ecosystems The same period has seen an exponential rise in environmental problems including the capacity of the Earth to support man s population The concern extends to man s effects on the biosphere the film of living organisms on the Earth s surface that supports man The common theme of ecologic research and environmental concerns is primary production the binding of sunlight energy into organic matter by plants that supports all life Many results from the IBP remain to be synthesized but enough data are available from that program and other research to develop a convincing summary of the primary production of the biosphere the purpose of this book The book had its origin in the parallel interests of the two editors and Gene E Likens which led them to prepare a symposium on the topic at the Second Biological Congress of the American Institute of Biological Sciences in Miami Florida October 24 1971 Revisions of the papers presented at that symposium appear as Chapters 2 8 9 10 and 15 in this book We have added other chapters that complement this core these include discussion and evaluation of methods for measuring productivity and regional production current findings on tropical productivity and models of primary productivity

Global Change and the Terrestrial Biosphere H. H.

Shugart, F. I. Woodward, 2011-01-31 Global climate change challenges ecologists to synthesize what we know to solve a problem with deep historical roots in our discipline. In ecology, the question: How do terrestrial ecosystems interact with the other earth systems to produce planetary change has sufficient depth to be the focal challenge. This central question is sharpened further as the changes that we may be manifesting upon our planet's systems of land, sea, air, and ice can have potential consequences for the future of human civilization. This book provides the depth of the history of global ecology and reviews the breadth of the ideas being studied today. Each chapter starts with a brief narrative about a scientist whose work traces forward into today's issues in global ecosystems. The discussions are framed in a growing realization that we may be altering the way our planet functions almost before we have gained the necessary knowledge of how it works at all.
