Review:

- The electric potential at a given location in a circuit is the amount of _____ per _____ at that location. The location of highest potential within a circuit is at the _____ (+, -) terminal of the battery. As charge moves through the external circuit from the _____ (+, -) to the _____ (+, -) terminal, the charge loses potential energy. As charge moves through the battery, it gains potential energy. The difference in electric potential between any two locations within the circuit is known as the electric potential difference; it is sometimes called the _____ and represented by the symbol _____. The rate at which charge moves past any point along the circuit is known as the _____ and is expressed with the unit _____.

The diagram at the right depicts an electric circuit in a car. The rear defroster is connected to the 12-Volt car battery. Several points are labeled along the circuit. Use this diagram for questions #2-#6.

- Charge flowing through this circuit possesses 0 J of potential energy at point ____.
- The overall effect of this circuit is to convert _____ energy into _____ energy.
