

## CHAPTER 11 FUNDAMENTALS OF GENETICS

### Early Concepts in Genetics

**Genetics Prehistory** - domestication of wolves into dogs of specific specialization of traits; breeding of plants.

**BLENDING HYPOTHESIS** – this explanation is developed by Aristotle.

- it says that the traits of the parents were blended in their offspring producing a form of intermediate between the two parents and the blended traits are passed on to the next generation.
- Example: Parents: *Tall and Short*  
Children: *Medium*

**GREGOR MENDEL** – he is the father of Modern Genetics. He is an Austrian monk who studied and bread pea plants. His observations helped him to understand the patterns of heredity.

**GENETICS** – the scientific study of heredity.

### Mendel's Investigations

Mendel's Experiments:

1. He cross-bred pea plants with different traits like (tall with short; wrinkled seed with smooth; green with yellow; etc.)
2. Observations: Mendel did several generations of breeding of pea plants  
**P** : parents; **F1**: first generation offspring; **F2**: 2<sup>nd</sup> gen. offspring from self fertilization of F1

**DOMINANT TRAIT** – a trait that masks the appearance of a recessive gene  
- a trait that can be showed in a hybrid.

**RECESSIVE TRAIT** – a trait that is masked by the dominant trait.  
- a trait that did not show in a hybrid.

p. 131 shows us the summary of F1 results:

	Plant Height	Seed shape	Seed Color
<b>P</b>	<b>TT</b> x <b>tt</b> <i>tall</i> x <i>short</i>	<b>RR</b> x <b>rr</b> round x wrinkled	<b>YY</b> x <b>yy</b> yellow x green
<b>F1</b>	<b>Tt</b> <i>tall</i>	<b>Rr</b> <i>round</i>	<b>Yy</b> <i>Yellow</i>
	After self pollination. of F1: <b>Tt</b> x <b>Tt</b>	After self pollination. of F1: <b>Rr</b> x <b>Rr</b>	After self pollination. of F1: <b>Yy</b> x <b>Yy</b>
<b>F2</b>	3 tall, 1 short	3 round, 1 wrinkled	3 yellow, 1 green

**Mendel's Hypothesis**: that each trait is controlled by something called a "factor" within the organism.

**GENE** – the term used by scientists to indicate a genetic factor that controls a trait

*The American Biology Teacher* ,1997 **Principles of Genetic Toxicology** D. Brusick,2013-06-29 The field of genetic toxicology has gone through remarkable development in the seven years since the appearance of the first edition of Principles of Genetic Toxicology One branch of toxicology research chemical mutagenesis has been elucidated and expanded as a result of increased effort testing and the sharing of data This expansion has occurred not only in the industrialized countries but also in countries that are comparatively less advanced in scientific implementation These developing countries have taken advantage of the basic practical methods that were so well described in the first edition of this work It is significant to note how many centers have been established throughout the world and are now studying the basic concepts and applying them to practical problems such as the detection of genetic effects caused by exposure to chemicals In fact there are now toxicology training centers in twelve countries Genetic toxicology in addition to being investigated as a science unto itself has been taught to people in the applied fields so that these techniques may be put to use in solving other biological problems For these reasons it is most useful to have an update of the basic methods and their development Dr Brusick should be congratulated for doing such an excellent job of assembling a text that will be worthwhile to any researcher who is interested in the principles of genetic toxicology Alexander Hollaender Council for Research Planning in Biological Sciences Inc Washington D C **Tietz Fundamentals of Clinical Chemistry and Molecular Diagnostics - E-Book** Nader
