

# WORK AND ENERGY

## Work and Energy

- **Work** is said to be done if (i) a force is applied on the object and (ii) the object is displaced from its original position.
- **Work done by a force** acting on an object is equal to the product of the force ( $F$ ) and the displacement ( $s$ ) of the object in the direction of the force, i.e.,  $W = F \times s = Fs$ .
- Work done by a force is **positive** if the force and the displacement are in **same direction**.
- Work done by a force is **negative** if the force and the displacement are in **opposite direction**.
- Work done by a force is **zero** if the force is **perpendicular** to the displacement, i.e., if there is **no displacement** in the direction of force. Work done by a force is also **zero**, when there is **no displacement** at all.
- Work is a scalar quantity.
- The unit of work is **joule (J)**. One joule work is said to be done on an object when a force of one newton displaces it by one metre along the line of action of the force.

$$1 \text{ J} = 1 \text{ N} \times 1 \text{ m} = 1 \text{ Nm}$$

Further, 1 kilo joule (1 kJ) = 1000 J and 1 mega joule (1 MJ) =  $10^6$  J.

## Energy

- **Energy** of an object is defined as its capacity for doing work and it is measured by the total quantity of work it can do. It is a scalar quantity.
- The unit of energy is the same as that of work, i.e., **joule (J)**.

## Forms of Energy

- **Kinetic energy** of an object is defined as the energy, which it possesses by virtue of its motion. It is **measured** by the amount of work that the object can do against an opposing force before it comes to rest.

## Derivation of kinetic energy

Now work done =  $F \times s$

... (i)

Thus, kinetic energy possessed by an object of mass,  $m$  and moving with a uniform velocity,  $v$  is

$$E_k = \frac{1}{2}mv^2$$

- The kinetic energy ( $E_k$ ) of an object is defined as half the product of its mass ( $m$ ) and the square of the speed ( $v$ ) of the object, i.e.,  $E_k = \frac{1}{2}mv^2$ .
