Mathematical and Computational Methods for Modelling, Approximation and Simulation Domingo Barrera, Sara Remogna, Driss Sbibi, 2022-05-08 This book contains plenary lectures given at the International Conference on Mathematical and Computational Modeling Approximation and Simulation dealing with three very different problems reduction of Runge and Gibbs phenomena difficulties arising when studying models that depend on the highly nonlinear behaviour of a system of PDEs and data fitting with truncated hierarchical B splines for the adaptive reconstruction of industrial models The book includes nine contributions mostly related to quasi interpolation This is a topic that continues to register a high level of interest both for those working in the field of approximation theory and for those interested in its use in a practical context Two chapters address the construction of quasi interpolants and three others focus on the use of quasi interpolation in solving integral equations The remaining four concern a problem related to the heat diffusion equation new results on the notion of convexity in probabilistic metric spaces which are applied to the study of the existence and uniqueness of the solution of a Volterra equation the use of smoothing splines to address an economic problem and finally the analysis of

poverty measures which is a topic of increased interest to society The book is addressed to researchers interested in Applied Mathematics with particular reference to the aforementioned topics

The High Blood Pressure Solution Richard D. Moore, 2001-05-01 Proves that the majority of cases of stroke heart attack and hypertension can easily be prevented by maintaining the proper ratio of potassium to sodium in the diet Updated with scientific evidence from a recent Finnish study showing a 60 percent decline in deaths attributed to strokes and heart attacks Provides a comprehensive program for balancing body chemistry at the cellular level High blood pressure is entirely preventable without reliance on synthetic drugs Dr Moore s approach is simple by maintaining the proper ratio of potassium to sodium in the diet blood pressure can be regulated at the cellular level preventing the development of hypertension and the high incidence of strokes and heart attacks associated with it Dr Moore updates this edition with a new preface reporting on the latest scientific research in support of his program The most striking results come from Finland where for several decades sodium chloride has been replaced nationwide with a commercial sodium potassium mixture resulting in a 60 percent decline nationwide in deaths attributed to strokes and heart attacks Extrapolated to America the Finnish statistics would mean 360 000 strokes prevented and 96 000 lives saved every year Dr Moore makes it clear that high blood pressure is only one symptom of an entire systemic imbalance He outlines a safe effective program that focuses on nutrition weight loss and exercise to bring the entire body chemistry into balance For those currently taking blood pressure medications he includes a chapter on working with your physician to ensure that any reduction in hypertension drugs can be effected gradually and safely

Under The Blade Thomas Lyson,2018-05-04 Under the Blade The Conversion of Agricultural Landscapes examines the patterns causes and consequences of current land use decisions in the United States particularly the conversion of farmland to housing roads and other development Changes in land use are the result of complex interactions among law economics landscape characteristics social and political forces ethics and aesthetics By examining farmland loss from each of these perspectives and then integrating the results into policy recommendations Under the Blade makes an important contribution to the ongoing debate on the optimal use of a finite resource land In 1998 the last farm in Des Plaines Illinois was subdivided Seven acres along the Niobrara River in north central Nebraska sold for USD5700 per acre twenty times the price for agricultural use Waukesha County Wisconsin although still largely in agriculture has been almost entirely zoned for small lot subdivisions Nationwide the cumulative effect of thousands of individual land use decisions is an orgiastic devouring of the countryside that consumes at least 1 4 million acres of rural land each year and fragments a much larger area The effects on landscape functions include loss of agricultural production water pollution increases in local runoff and flooding loss of habitat and biodiversity and the loss of natural beauty In exchange we get malls retail strips and an ugly sprawl that degrades people and community How have we come to this and more importantly how might we find a better sustainable approach to the use of land Land use decisions are the result of complex interactions among law economics landscape characteristics population growth social and political forces ethics and aesthetics Under the Blade The Conversion of Agricultural Landscapes examines the loss of farmland and other rural lands from each of these perspectives and shows how interactions among different factors greatly complicate sustainable land management Included throughout the seven main chapters of the book are descriptions of some of the tools and strategies that can be used to preserve farmland and guide development The application of these tools is illustrated by 22 case studies of towns and regions throughout the United States each with a somewhat different challenge response and degree of success or failure Dietrich Bonhoeffer a Protestant theologian hanged by the Nazis in 1945 stated that the ultimate test of a moral society is the kind of world that it leaves to its children Our current choices in the use of the land are among the most important factors shaping that future world and Under the Blade demonstrates that the quality of that future is far from certain
