

### Converter w/charge wizard (if so equipped)

Some converters may be equipped with a charge wizard. There are (3) possible charging modes; NORMAL, BOOST and STORAGE. The charge wizard will automatically select the best mode to charge your battery. A green LED next to the wizard mode button will indicate by flashes, which mode is currently being used.

**NORMAL MODE:** Green LED flashes once per second; battery is between 50% and 90% charged. Green LED will flash 2-3 times per second; battery is 90% charged. Output voltage is 13.6VDC and the converter is safely completing the charge of the battery.

**BOOST MODE:** Green LED is on solid. Output voltage is 14.4VDC to rapidly charge the battery up to 90% of full charge.

**STORAGE MODE:** Green LED flashes every 6-8 seconds. Output voltage has been reduced to 13.2VDC; the RV battery is fully charged and converter is maintaining the charge.

**MANUAL MODE (Not recommended):** The wizard mode button is used to override the charge wizard. Refer to the converter owner's manual for additional information.

**REVERSE BATTERY PROTECTION:** Reverse polarity fuse(s) provide protection for the converter when a battery is used. If the battery is connected backwards to the fuse board a fuse will blow preventing damage to the converter. Four easily accessible fuses are located next to the wizard button. Replace with fuses of the same type and rating.
