*Global Science* John W. Christensen, 2000      **Modeling Environment-Improving Technological Innovations under Uncertainty** Alexander Golub, Anil Markandya, 2008-12-08 The issues of technology and uncertainty are very much at the heart of the policy debate of how much to control greenhouse gas emissions The costs of doing so are present and high while the benefits are very much in the future and most importantly they are highly uncertain Whilst there is broad consensus on the key elements of climate change science and agreement that near term actions are needed to prevent dangerous anthropogenic interference with the climate system there is little agreement on the costs and benefits of climate policy The book looks at different ways of reconciling the needs for sustainability and equity with the costs of action now Presenting a compendium of methodologies for evaluating the economic impact of technological innovation upon climate change policy this book describes mathematical models and their predictions The goal is to provide a practitioner's guide for doing the science of economics and climate change Because the assumptions motivating different problems in the economics of climate change have different complexities a number of models are presented with varying levels of difficulty reduced form and structural partial and general equilibrium closed form and computational A unifying theme of these models is the incorporation of a number of price and quantity instruments and an analysis of their respective efficacies This book presents models that contain structural uncertainty i.e. uncertainty that economic agents respond to via their risk attitudes The novelty of this book is to relate the effects of risk and risk attitudes to environment improving technological innovation      **The**

**American Biology Teacher**, 1938 Includes section Books      [Zoo Conservation Biology](#) John E. Fa, Stephan M. Funk, Donnamarie O'Connell, 2011-08-18 In the face of ever declining biodiversity zoos have a major role to play in species conservation Written by professionals involved in in situ conservation and restoration projects internationally this is a critical assessment of the contribution of zoos to species conservation through evidence amassed from a wide range of sources The first part outlines the biodiversity context within which zoos should operate introducing the origins and global spread of zoos and exploring animal collection composition The second part focuses on the basic elements of keeping viable captive animal populations It considers the consequences of captivity on animals the genetics of captive populations and the performance of zoos in captive breeding The final part examines ways in which zoos can make a significant difference to conservation now and in the future Bridging the gap between pure science and applied conservation this is an ideal resource for both conservation biologists and zoo professionals      **Report** University of Michigan.
