Quick Ai For Students 2025:

Designing Instruction with Generative AI Brent A. Anders, 2025-09-16 Designing Instruction with Generative AI offers a novel set of tools and strategies for leveraging generative AI to create engaging and personalized learning experiences. While instructional designers are a tremendous asset to higher education, not all colleges or universities have the robust staff needed to support all instructors on staff or large student populations. Drawing on a wealth of research, professional experience, and strategic insights, this book equips new and seasoned teaching faculty and trainers with step-by-step directions on how freely accessible artificial intelligence software can assist with all aspects of the course creation and instruction process and cater to the needs of diverse learners. Each chapter offers forward thinking and empirically validated ways to help faculty create and improve instructional materials, course design, and learning environments while supporting their digital literacies. Rather than introduce AI as a means of outsourcing subject area expertise, critical thinking, or cognitive processes, the author instead emphasizes its potential to build on traditionally honed knowledge and foundational instructional design practices. From optimizing course alignment and accessibility practices to fostering active learning, motivation, and engagement, educators will find new solutions to common teaching and learning challenges with greater efficiency in time and capacity. The Open Access version of this book is available at <http://www.taylorfrancis.com> and has been made available under a Creative Commons Attribution Non-Commercial No Derivatives CC BY-NC-ND 4.0 license.

Leadership, Management and AI Amanpreet Singh Chopra, Sridhar Manohar, 2025-12-31 This book is about the future of leadership and organisations with the integration of artificial intelligence (AI) in the business ecosystem. The book, from the perspective of academic inquiries, suggests that the emergence of AI as a transformative force in business calls for redefining traditional competitive and leadership theories and frameworks. The manuscript puts forward the alternative versions of classic business, technological, and economic models like Porter's Five Forces model, NASA's technology maturity model, Technology Readiness Level, and the classic economic theory of division of labour. The work discusses the developing norms and contours of human-AI workforce integration and the challenges that leadership will encounter to realign corporate strategies with AI to emerge it as a critical cog that will drive innovation, growth, and stakeholder value. The book, while revealing the critical role of AI in driving business growth, will also put forward the new set of competencies necessary for the next generation of leadership to manage AI-driven corporate functions. With the integration of AI in organisational hierarchy, leadership needs to deliberate on what to delegate and how much to delegate to AI for the decision-making process and what kind of firewalls would be required to have oversight on AI and move towards developing and deploying Responsible AI.

Photography eBook GURMEET SINGH DANG, **The AI Con** Emily M. Bender, Alex Hanna, 2025-05-13. A smart, incisive look at the technologies sold as artificial intelligence: the drawbacks and pitfalls of technology sold under this banner and why it's crucial to recognize the many ways in which AI hype covers for a small set of power-hungry actors at work and in the world. Is artificial intelligence going to take over the world? Have big tech scientists created an artificial lifeform that can think on its own? Is it going to put authors, artists, and others out of business? Are we about to enter an age where computers are better than humans at everything? The answer to these questions, linguist Emily M. Bender and sociologist Alex Hanna make clear, is no. They wish. LOL, and definitely not. This kind of thinking is a symptom of a phenomenon known as AI hype. Hype looks and smells fishy. It twists words and helps the rich get richer by justifying data theft, motivating surveillance capitalism, and devaluing human creativity in order to replace meaningful work with jobs that treat people like machines. In *The AI Con*, Bender and Hanna offer a sharp, witty, and wide-ranging take-down of AI hype across its many forms. Bender and Hanna show you how to spot AI hype, how to deconstruct it, and how to expose the power grabs it aims to hide. Armed with these tools, you will be prepared to push back against AI hype at work, as a consumer in the marketplace, as a skeptical newsreader, and as a citizen holding policymakers to account. Together, Bender and Hanna expose AI hype for what it is: a mask for Big Tech's drive for profit with little concern for who it affects.

Moritz Merklinger, 2022-09-12 Seminar paper from the year 2021 in the subject Computer Sciences Artificial Intelligence grade 1.0 University of Passau language English abstract This paper answers the question how AI does impact the organizational identity in client focused investment advisory It is evident that an employee's fundamental work may shift when working with a decision making self learning and intelligent AI It is also conceivable that the employee's own values or work identity may

adjust to the AI in some way But what about when you do not just analyze the individual consultant If you look at the broader context and analyze the change in values and identity of the organization as a whole To understand how the values and identity of the individual but more importantly the identity of an organization are affected by the introduction of AI five asset managers from one of Germany s leading cooperative banks are interviewed coded and analyzed Based on research it is shown that while the introduction of AI has a major impact on the way advisors work it has little to almost no impact on the identity of the organization That this may have something to do with the scope of application of AI in the institution and the value stability of the bank will be discussed in more detail later in the paper The study joins the existing research on the topic of AI changing organizational identity
